Exam Questions NSE4_FGT-7.0

Fortinet NSE 4 - FortiOS 7.0

About ExamBible

[Your Partner of IT Exam](#)

Found in 1998

ExamBible is a company specialized on providing high quality IT exam practice study materials, especially Cisco CCNA, CCDA, CCNP, CCIE, Checkpoint CCSE, CompTIA A+, Network+ certification practice exams and so on. We guarantee that the candidates will not only pass any IT exam at the first attempt but also get profound understanding about the certificates they have got. There are so many alike companies in this industry, however, ExamBible has its unique advantages that other companies could not achieve.

Our Advances

* 99.9% Uptime

All examinations will be up to date.

* 24/7 Quality Support

We will provide service round the clock.

* 100% Pass Rate

Our guarantee that you will pass the exam.

* Unique Gurantee

If you do not pass the exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

NEW QUESTION 1

An administrator wants to simplify remote access without asking users to provide user credentials. Which access control method provides this solution?

- A. ZTNA IP/MAC filtering mode
- B. ZTNA access proxy
- C. SSL VPN
- D. L2TP

Answer: B

Explanation:

FortiGate Infrastructure 7.2 Study Guide (p.165): "ZTNA access proxy allows users to securely access resources through an SSL-encrypted access proxy. This simplifies remote access by eliminating the use of VPNs."

This is true because ZTNA access proxy is a feature that allows remote users to access internal applications without requiring VPN or user credentials. ZTNA access proxy uses a secure tunnel between the user's device and the FortiGate, and authenticates the user based on device identity and context. The user only needs to install a lightweight agent on their device, and the FortiGate will automatically assign them to the appropriate application group based on their device profile. This simplifies remote access and enhances security by reducing the attack surface¹²

NEW QUESTION 2

Which two statements are correct about SLA targets? (Choose two.)

- A. You can configure only two SLA targets per one Performance SLA.
- B. SLA targets are optional.
- C. SLA targets are required for SD-WAN rules with a Best Quality strategy.
- D. SLA targets are used only when referenced by an SD-WAN rule.

Answer: BD

NEW QUESTION 3

Refer to the exhibit.

A network administrator is troubleshooting an IPsec tunnel between two FortiGate devices. The administrator has determined that phase 1 status is up, but phase 2 fails to come up.

The diagram shows two FortiGate devices, HQ-FortiGate and Remote-FortiGate, connected via an IPsec tunnel. Below the diagram are two screenshots of the FortiGate web interface showing the Phase 2 configuration for the tunnel.

HQ-FortiGate Phase 2 Configuration:

Name	Local Address	Remote Address
ToRemote	0.0.0.0/0.0.0.0	0.0.0.0/0.0.0.0

Edit Phase 2:

Name: ToRemote

Comments: [Empty]

Local Address: Subnet 0.0.0.0/0.0.0.0

Remote Address: Subnet 0.0.0.0/0.0.0.0

Phase 2 Proposal: Add

Encryption: AES128 Authentication: SHA1

Enable Replay Detection: ☒

Enable Perfect Forward Secrecy (PFS): ☒

Diffie-Hellman Group: [32, 31, 30, 29, 28, 27, 21, 20, 19, 18, 17, 16, 15, 14, 5, 2, 1] (Group 2 is selected)

Local Port: All ☒

Remote Port: All ☒

Protocol: All ☒

Auto-negotiate: ☐

Autokey Keep Alive: ☐

Key Lifetime: Seconds 43200

Remote-FortiGate Phase 2 Configuration:

Name	Local Address	Remote Address
ToRemote	0.0.0.0/0.0.0.0	0.0.0.0/0.0.0.0

Edit Phase 2:

Name: ToRemote

Comments: [Empty]

Local Address: Subnet 0.0.0.0/0.0.0.0

Remote Address: Subnet 0.0.0.0/0.0.0.0

Phase 2 Proposal: Add

Encryption: AES256 Authentication: SHA1

Enable Replay Detection: ☒

Enable Perfect Forward Secrecy (PFS): ☒

Diffie-Hellman Group: [32, 31, 30, 29, 28, 27, 21, 20, 19, 18, 17, 16, 15, 14, 5, 2, 1] (Group 2 is selected)

Local Port: All ☒

Remote Port: All ☒

Protocol: All ☒

Auto-negotiate: ☐

Autokey Keep Alive: ☐

Key Lifetime: Seconds 14400

Based on the phase 2 configuration shown in the exhibit, which configuration change will bring phase 2 up?

- A. On Remote-FortiGate, set Seconds to 43200.
- B. On HQ-FortiGate, set Encryption to AES256.
- C. On HQ-FortiGate, enable Diffie-Hellman Group 2.
- D. On HQ-FortiGate, enable Auto-negotiate.

Answer: B

NEW QUESTION 4

Which statement about the policy ID number of a firewall policy is true?

- A. It is required to modify a firewall policy using the CLI.
- B. It represents the number of objects used in the firewall policy.
- C. It changes when firewall policies are reordered.
- D. It defines the order in which rules are processed.

Answer: A

NEW QUESTION 5

In consolidated firewall policies, IPv4 and IPv6 policies are combined in a single consolidated policy. Instead of separate policies. Which three statements are true about consolidated IPv4 and IPv6 policy configuration? (Choose three.)

- A. The IP version of the sources and destinations in a firewall policy must be different.
- B. The Incoming Interface
- C. Outgoing Interface
- D. Schedule, and Service fields can be shared with both IPv4 and IPv6.
- E. The policy table in the GUI can be filtered to display policies with IPv4, IPv6 or IPv4 and IPv6 sources and destinations.
- F. The IP version of the sources and destinations in a policy must match.
- G. The policy table in the GUI will be consolidated to display policies with IPv4 and IPv6 sources and destinations.

Answer: BDE

NEW QUESTION 6

Which statement correctly describes NetAPI polling mode for the FSSO collector agent?

- A. The collector agent uses a Windows API to query DCs for user logins.
- B. NetAPI polling can increase bandwidth usage in large networks.
- C. The collector agent must search security event logs.
- D. The NetSession Enum function is used to track user logouts.

Answer: D

Explanation:

FortiGate_Infrastructure_7.0 page 270: "NetAPI: polls temporary sessions created on the DC when a user logs in or logs out and calls the NetSessionEnum function in Windows."

NEW QUESTION 7

Which two protocols are used to enable administrator access of a FortiGate device? (Choose two.)

- A. SSH
- B. HTTPS
- C. FTM
- D. FortiTelemetry

Answer: AB

NEW QUESTION 8

Which two settings are required for SSL VPN to function between two FortiGate devices? (Choose two.)

- A. The client FortiGate requires a client certificate signed by the CA on the server FortiGate.
- B. The client FortiGate requires a manually added route to remote subnets.
- C. The client FortiGate uses the SSL VPN tunnel interface type to connect SSL VPN.
- D. The server FortiGate requires a CA certificate to verify the client FortiGate certificate.

Answer: CD

Explanation:

<https://docs.fortinet.com/document/fortigate/7.0.9/administration-guide/508779/fortigate-as-ssl-vpn-client>

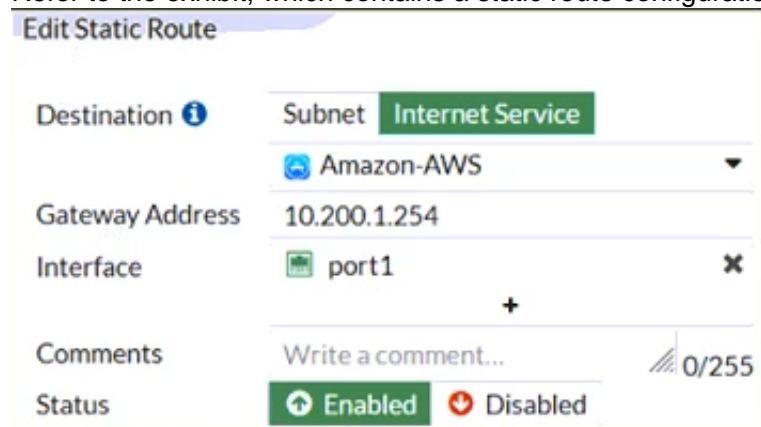

To establish an SSL VPN connection between two FortiGate devices, the following two settings are required:

The server FortiGate requires a CA certificate to verify the client FortiGate certificate: The server FortiGate will use a CA (Certificate Authority) certificate to verify the client FortiGate certificate, ensuring that the client device is trusted and allowed to establish an SSL VPN connection.

The client FortiGate requires the SSL VPN tunnel interface type to connect SSL VPN: The client FortiGate must have an SSL VPN tunnel interface type configured in order to establish an SSL VPN connection. This interface type will be used to connect to the server FortiGate over the SSL VPN.

NEW QUESTION 9

Refer to the exhibit, which contains a static route configuration. An administrator created a static route for Amazon Web Services.

The screenshot shows the 'Edit Static Route' configuration page in the FortiGate GUI. The 'Destination' field is set to 'Subnet' with a dropdown menu showing 'Internet Service' and 'Amazon-AWS'. The 'Gateway Address' is '10.200.1.254'. The 'Interface' is 'port1'. The 'Comments' field is 'Write a comment...' with a character count of '0/255'. The 'Status' is 'Enabled'.

Which CLI command must the administrator use to view the route?

- A. get router info routing-table database
- B. diagnose firewall route list
- C. get internet-service route list
- D. get router info routing-table all

Answer: B

Explanation:

ISDB static route will not create entry directly in routing-table. Reference: <https://community.fortinet.com/t5/FortiGate/Technical-Tip-Creating-a-static-route-for-Predefined-Internet/ta-p/1> and here

<https://community.fortinet.com/t5/FortiGate/Technical-Tip-Verify-the-matching-policy-route/ta-p/190640>

FortiGate Infrastructure 7.2 Study Guide (p.16 and p.59): "Even though they are configured as static routes, ISDB routes are actually policy routes and take precedence over any other routes in the routing table. As such, ISDB routes are added to the policy routing table." "FortiOS maintains a policy route table that you can view by running the diagnose firewall proute list command."

NEW QUESTION 10

Which two features of IPsec IKEv1 authentication are supported by FortiGate? (Choose two.)

- A. Extended authentication (XAuth) for faster authentication because fewer packets are exchanged
- B. Extended authentication (XAuth) to request the remote peer to provide a username and password
- C. No certificate is required on the remote peer when you set the certificate signature as the authentication method
- D. Pre-shared key and certificate signature as authentication methods

Answer: BD

Explanation:

* B. Extended authentication (XAuth) to request the remote peer to provide a username and password

This is true because extended authentication (XAuth) is a feature that allows FortiGate to request the remote peer to provide a username and password during the IPsec IKEv1 authentication process. XAuth is an extension of the IKEv1 protocol that adds an additional authentication step after the main mode or aggressive mode exchange. XAuth can be used with either pre-shared key or certificate signature as the primary authentication method, and it can provide stronger security and granular access control for IPsec VPNs¹²

* D. Pre-shared key and certificate signature as authentication methods

This is true because pre-shared key and certificate signature are two authentication methods that are supported by FortiGate for IPsec IKEv1 VPNs. Pre-shared key is a method where both peers share a secret key that is used to authenticate each other during the IKEv1 exchange. Certificate signature is a method where both peers have digital certificates that are used to verify each other's identity and public key during the IKEv1 exchange. Both methods can be combined with XAuth for additional authentication

NEW QUESTION 10

The IPS engine is used by which three security features? (Choose three.)

- A. Antivirus in flow-based inspection
- B. Web filter in flow-based inspection
- C. Application control
- D. DNS filter
- E. Web application firewall

Answer: ABC

Explanation:

FortiGate Security 7.2 Study Guide (p.385): "The IPS engine is responsible for most of the features shown in this lesson: IPS and protocol decoders. It's also responsible for application control, flow-based antivirus protection, web filtering, and email filtering."

NEW QUESTION 15

Which scanning technique on FortiGate can be enabled only on the CLI?

- A. Heuristics scan
- B. Trojan scan
- C. Antivirus scan
- D. Ransomware scan

Answer: A

NEW QUESTION 17

Which of the following SD-WAN load balancing method use interface weight value to distribute traffic? (Choose two.)

- A. Source IP
- B. Spillover
- C. Volume
- D. Session

Answer: CD

Explanation:

<https://docs.fortinet.com/document/fortigate/6.0.0/handbook/49719/configuring-sd-wan-load-balancing>

NEW QUESTION 19

Which three security features require the intrusion prevention system (IPS) engine to function? (Choose three.)

- A. Web filter in flow-based inspection
- B. Antivirus in flow-based inspection
- C. DNS filter

- D. Web application firewall
- E. Application control

Answer: ABE

Explanation:

<https://docs.fortinet.com/document/fortigate/7.0.0/new-features/739623/dns-filter-handled-by-ips-engine-in-flow>

NEW QUESTION 21

A network administrator has enabled SSL certificate inspection and antivirus on FortiGate. When downloading an EICAR test file through HTTP, FortiGate detects the virus and blocks the file. When downloading the same file through HTTPS, FortiGate does not detect the virus and the file can be downloaded.

What is the reason for the failed virus detection by FortiGate?

- A. The website is exempted from SSL inspection.
- B. The EICAR test file exceeds the protocol options oversize limit.
- C. The selected SSL inspection profile has certificate inspection enabled.
- D. The browser does not trust the FortiGate self-signed CA certificate.

Answer: AC

Explanation:

SSL Inspection Profile, on the Inspection method there are 2 options to choose from, SSL Certificate Inspection or Full SSL Inspection. FG SEC 7.2 Studi Guide: Full SSL Inspection level is the only choice that allows antivirus to be effective.

NEW QUESTION 25

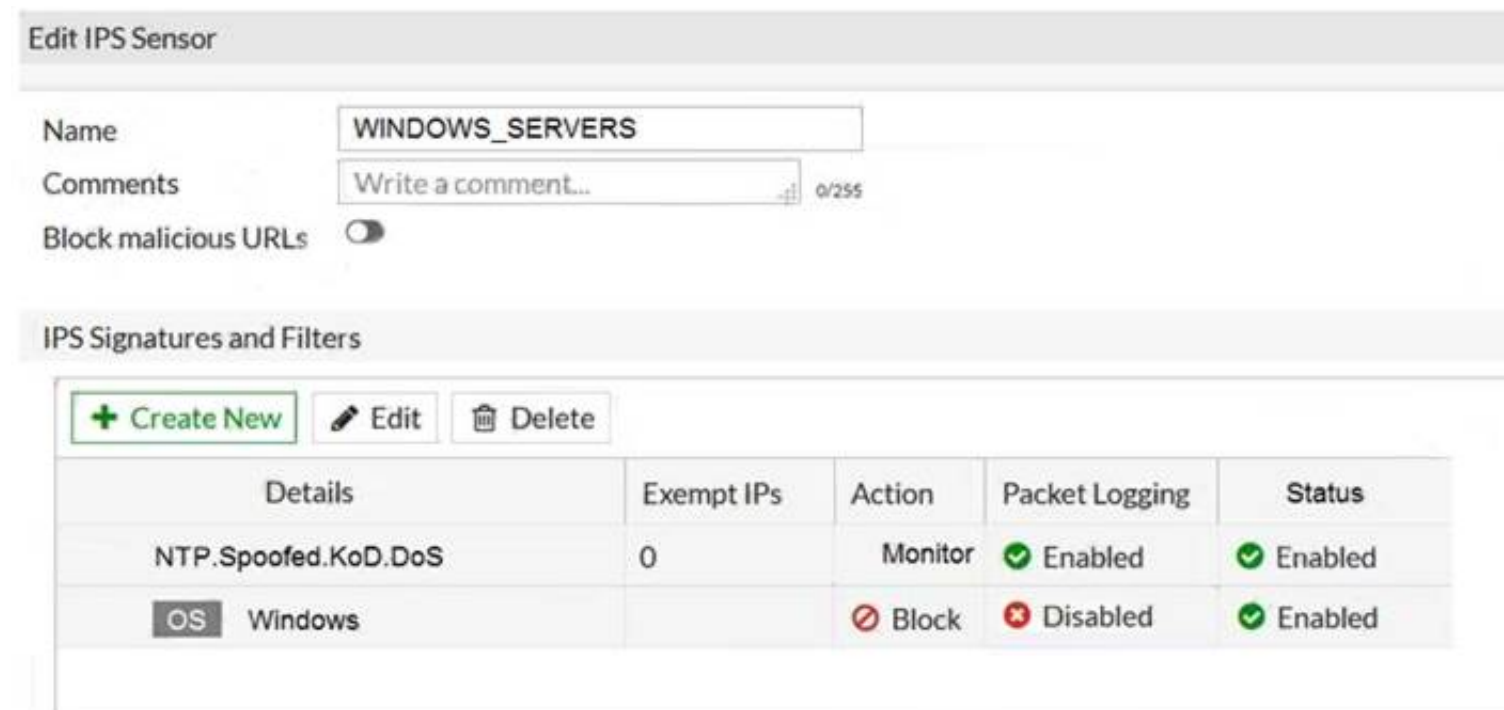

On FortiGate, which type of logs record information about traffic directly to and from the FortiGate management IP addresses?

- A. System event logs
- B. Forward traffic logs
- C. Local traffic logs
- D. Security logs

Answer: C

NEW QUESTION 26

Refer to the exhibit.

Details	Exempt IPs	Action	Packet Logging	Status
NTP.Spoofed.KoD.DoS	0	Monitor	Enabled	Enabled
OS Windows		Block	Disabled	Enabled

The exhibit shows the IPS sensor configuration.

If traffic matches this IPS sensor, which two actions is the sensor expected to take? (Choose two.)

- A. The sensor will allow attackers matching the Microsoft Windows.iSCSI.Target.DoS signature.
- B. The sensor will block all attacks aimed at Windows servers.
- C. The sensor will reset all connections that match these signatures.
- D. The sensor will gather a packet log for all matched traffic.

Answer: AB

NEW QUESTION 27

Refer to exhibit.

An administrator configured the web filtering profile shown in the exhibit to block access to all social networking sites except Twitter. However, when users try to access twitter.com, they are redirected to a FortiGuard web filtering block page.

Name: Allow_Twitter
Comments: Write a comment... 0/255
Feature set: **Flow-based** Proxy-based
☒ FortiGuard Category Based Filter

☒ Allow
☒ Monitor
☒ Block
☒ Warning
☒ Authenticate

Name	Action
Medicine	<input checked="" type="checkbox"/> Allow
News and Media	<input checked="" type="checkbox"/> Allow
Social Networking	<input checked="" type="checkbox"/> Block
Political Organizations	<input checked="" type="checkbox"/> Allow
Reference	<input checked="" type="checkbox"/> Allow
Global Religion	<input checked="" type="checkbox"/> Allow
Shopping	<input checked="" type="checkbox"/> Allow
Society and Lifestyles	<input checked="" type="checkbox"/> Allow
Sports	<input checked="" type="checkbox"/> Allow

☒ Static URL Filter
Block invalid URLs: ☐
URL Filter: ☒

+ Create New
Edit
Delete
Search

URL	Type	Action	Status
twitter.com	Wildcard	<input checked="" type="checkbox"/> Allow	<input checked="" type="checkbox"/> Enable

Block malicious URLs discovered by FortiSandbox: ☐
Content Filter: ☐

Based on the exhibit, which configuration change can the administrator make to allow Twitter while blocking all other social networking sites?

- A. On the FortiGuard Category Based Filter configuration, set Action to Warning for Social Networking
- B. On the Static URL Filter configuration, set Type to Simple
- C. On the Static URL Filter configuration, set Action to Exempt.
- D. On the Static URL Filter configuration, set Action to Monitor.

Answer: C

NEW QUESTION 29

Examine this output from a debug flow:

```
id=20085 trace_id=1 func=print_pkt_detail line=5363 msg="vd-root received a packet(proto=1,
10.0.1.10:1->10.200.1.254:2048)
from port3. type=8, code=0, id=1, seq=33."
id=20085 trace_id=1 func=init_ip_session_common line=5519 msg="allocate a new session=00000340"
id=20085 trace_id=1 func=vf_ip_route_input_common line=2583 msg="find a route: flag=04000000 gw=10.200.1.254 via
port1"
id=20085 trace_id=1 func=fw_forward_handler line=586 msg="Denied by forward policy check (policy 0)"
```

Why did the FortiGate drop the packet?

- A. The next-hop IP address is unreachable.
- B. It failed the RPF check .
- C. It matched an explicitly configured firewall policy with the action DENY.
- D. It matched the default implicit firewall policy.

Answer: D

Explanation:

<https://kb.fortinet.com/kb/documentLink.do?externalID=13900> <https://www.fortinetguru.com/2016/03/what-is-policy-id-0-and-why-lot-of-denied-traffic-on-this-policy/>

NEW QUESTION 33

View the exhibit.

Destination: **Subnet** Named Address Internet Service
172.13.24.0/255.255.255.0
Interface: TunnelB
Administrative Distance: 5
Comments:
Status: ☒ Enabled ☒ Disabled
Advanced Options
Priority: 30

Destination: **Subnet** Named Address Internet Service
172.13.24.0/255.255.255.0
Interface: TunnelA
Administrative Distance: 10
Comments:
Status: ☒ Enabled ☒ Disabled
Advanced Options
Priority: 0

Which of the following statements are correct? (Choose two.)

- A. This setup requires at least two firewall policies with the action set to IPsec.
- B. Dead peer detection must be disabled to support this type of IPsec setup.
- C. The TunnelB route is the primary route for reaching the remote sit
- D. The TunnelA route is used only if the TunnelB VPN is down.

E. This is a redundant IPsec setup.

Answer: CD

Explanation:

<https://docs.fortinet.com/document/fortigate/6.2.4/cookbook/632796/ospf-with-ipsec-vpn-for-network-redundan>

NEW QUESTION 37

How does FortiGate act when using SSL VPN in web mode?

- A. FortiGate acts as an FDS server.
- B. FortiGate acts as an HTTP reverse proxy.
- C. FortiGate acts as DNS server.
- D. FortiGate acts as router.

Answer: B

NEW QUESTION 38

Which two statements about FortiGate FSSO agentless polling mode are true? (Choose two.)

- A. FortiGate uses the AD server as the collector agent.
- B. FortiGate uses the SMB protocol to read the event viewer logs from the DCs.
- C. FortiGate does not support workstation check .
- D. FortiGate directs the collector agent to use a remote LDAP server.

Answer: BC

Explanation:

You can deploy FSSO w/o installing an agent. FG polls the DCs directly, instead of receiving logon info indirectly from a collector agent.

Because FG collects all of the data itself, agentless polling mode requires greater system resources, and it doesn't scale as easily.

Agentless polling mode operates in a similar way to WinSecLog, but with only two event IDs: 4768 and 4769. Because there's no collector agent, FG uses the SMB protocol to read the event viewer logs from the DCs.

FG acts as a collector. It 's responsible for polling on top of its normal FSSO tasks but does not have all the extra features, such as workstation checks, that are available with the external collector agent.

NEW QUESTION 42

Examine the exhibit, which contains a virtual IP and firewall policy configuration.

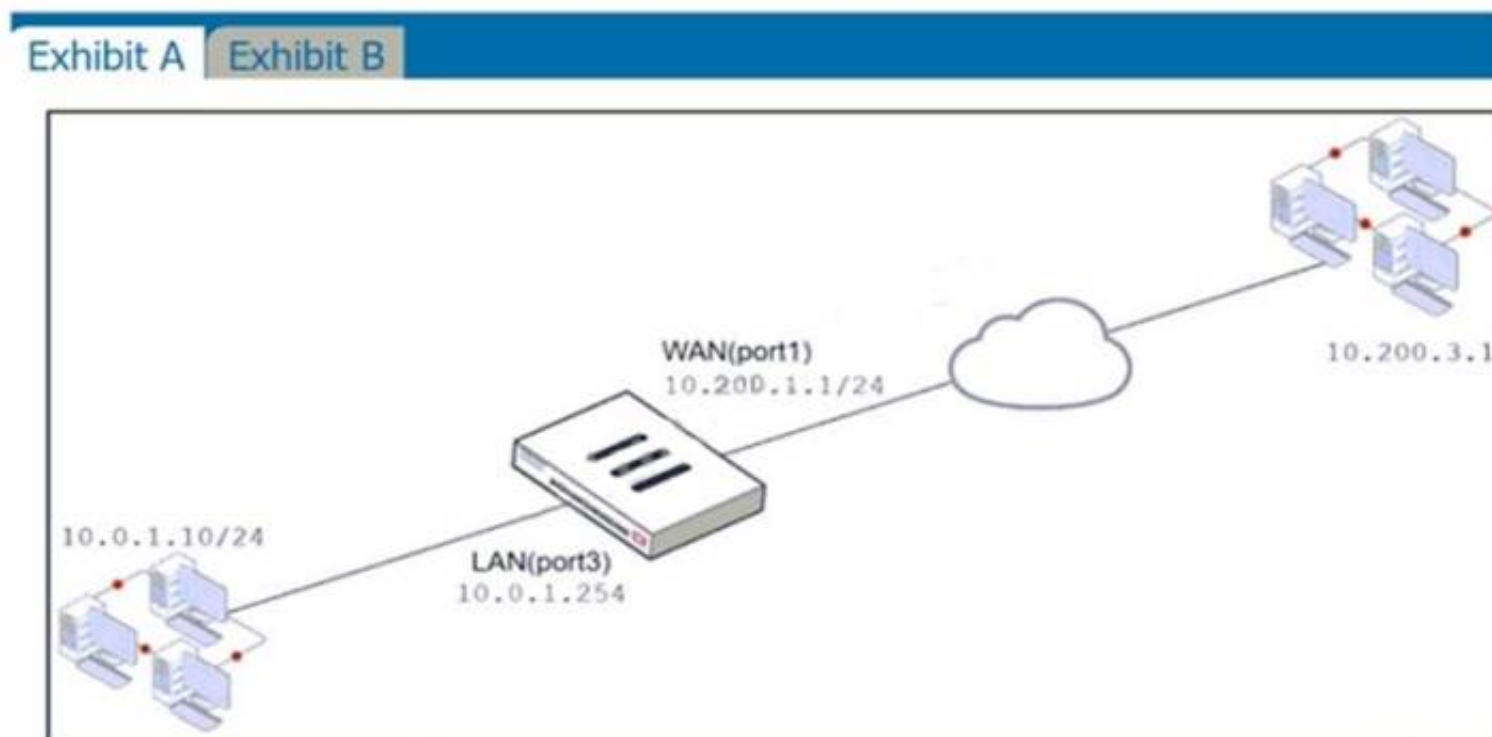

Exhibit A

Exhibit B

Name	From	To	Source	Destination	Schedule	Service	Action	NAT

The WAN (port1) interface has the IP address 10.200. 1. 1/24. The LAN (port2) interface has the IP address 10.0. 1.254/24. The first firewall policy has NAT enabled on the outgoing interface address. The second firewall policy is configured with a VIP as the destination address. Which IP address will be used to source NAT the Internet traffic coming from a workstation with the IP address 10.0. 1. 10/24?

- A. 10.200. 1. 10
- B. Any available IP address in the WAN (port1) subnet 10.200. 1.0/24 66 of 108
- C. 10.200. 1. 1
- D. 10.0. 1.254

Answer: A

Explanation:

Permit usage of CLI diagnostic commands

Override Idle Timeout

Based on the administrator profile settings, what permissions must the administrator set to run the diagnose firewall auth list CLI command on FortiGate?

- A. Custom permission for Network
- B. Read/Write permission for Log & Report
- C. CLI diagnostics commands permission
- D. Read/Write permission for Firewall

Answer: C

Explanation:

<https://kb.fortinet.com/kb/documentLink.do?externalID=FD50220>

NEW QUESTION 48

What is the effect of enabling auto-negotiate on the phase 2 configuration of an IPsec tunnel?

- A. FortiGate automatically negotiates different local and remote addresses with the remote peer.
- B. FortiGate automatically negotiates a new security association after the existing security association expires.
- C. FortiGate automatically negotiates different encryption and authentication algorithms with the remote peer.
- D. FortiGate automatically brings up the IPsec tunnel and keeps it up, regardless of activity on the IPsec tunnel.

Answer: D

Explanation:

<https://kb.fortinet.com/kb/documentLink.do?externalID=12069>

FortiGate Infrastructure 7.2 Study Guide (p.264): "...then FortiGate might drop interesting traffic because of the absence of active SAs. To prevent this, you can enable Auto-negotiate. When you do this, FortiGate not only negotiates new SAs before the current SAs expire, but it also starts using the new SAs right away."
"Another benefit of enabling Auto-negotiate is that the tunnel comes up and stays up automatically, even when there is no interesting traffic. When you enable Autokey Keep Alive and keep Auto-negotiate disabled, the tunnel does not come up automatically unless there is interesting traffic. However, after the tunnel is up, it stays that way because FortiGate periodically sends keep alive packets over the tunnel. Note that when you enable Auto-negotiate, Autokey Keep Alive is implicitly enabled."

NEW QUESTION 50

Which of the following are valid actions for FortiGuard category based filter in a web filter profile ui proxy-based inspection mode? (Choose two.)

- A. Warning
- B. Exempt
- C. Allow
- D. Learn

Answer: AC

NEW QUESTION 54

An administrator needs to increase network bandwidth and provide redundancy.
What interface type must the administrator select to bind multiple FortiGate interfaces?

- A. VLAN interface
- B. Software Switch interface
- C. Aggregate interface
- D. Redundant interface

Answer: C

Explanation:

An aggregate interface is a logical interface that combines two or more physical interfaces into one virtual interface1. An aggregate interface can increase network bandwidth and provide redundancy by distributing traffic across multiple physical interfaces using a load balancing algorithm1. An aggregate interface can also support link aggregation control protocol (LACP) to negotiate the link aggregation settings with the connected device1.

NEW QUESTION 58

Which two configuration settings are synchronized when FortiGate devices are in an active-active HA cluster? (Choose two.)

- A. FortiGuard web filter cache
- B. FortiGate hostname
- C. NTP
- D. DNS

Answer: CD

Explanation:

In the 7.2 Infrastructure Guide (page 306) the list of configuration settings that are NOT synchronized includes both 'FortiGate host name' and 'Cache'

NEW QUESTION 60

Which CLI command allows administrators to troubleshoot Layer 2 issues, such as an IP address conflict?

- A. get system status
- B. get system performance status
- C. diagnose sys top
- D. get system arp

Answer: D

Explanation:

"If you suspect that there is an IP address conflict, or that an IP has been assigned to the wrong device, you may need to look at the ARP table."

NEW QUESTION 61

Which two statements are correct about NGFW Policy-based mode? (Choose two.)

- A. NGFW policy-based mode does not require the use of central source NAT policy
- B. NGFW policy-based mode can only be applied globally and not on individual VDOMs
- C. NGFW policy-based mode supports creating applications and web filtering categories directly in a firewall policy
- D. NGFW policy-based mode policies support only flow inspection

Answer: CD

NEW QUESTION 64

Which of the following statements about backing up logs from the CLI and downloading logs from the GUI are true? (Choose two.)

- A. Log downloads from the GUI are limited to the current filter view
- B. Log backups from the CLI cannot be restored to another FortiGat
- C. Log backups from the CLI can be configured to upload to FTP as a scheduled time
- D. Log downloads from the GUI are stored as LZ4 compressed files.

Answer: AB

NEW QUESTION 67

Refer to the exhibits.

Exhibit A shows a network diagram. Exhibit B shows the firewall policy configuration and a VIP object configuration.

The WAN (port1) interface has the IP address 10.200.1.1/24.

The LAN (port3) interface has the IP address 10.0.1.254/24.

The administrator disabled the WebServer firewall policy.

Which IP address will be used to source NAT the traffic, if a user with address 10.0.1.10 connects over SSH to the host with address 10.200.3.1?

- A. 10.200.1.10
- B. 10.0.1.254
- C. 10.200.1.1
- D. 10.200.3.1

Answer: C

Explanation:

Traffic is coming from LAN to WAN, matches policy Full_Access which has NAT enable, so traffic uses source IP address of outgoing interface. Simple SNAT.

NEW QUESTION 68

If the Issuer and Subject values are the same in a digital certificate, which type of entity was the certificate issued to?

- A. A CRL
- B. A person
- C. A subordinate CA
- D. A root CA

Answer: D

NEW QUESTION 73

Refer to the exhibit.

Which contains a network diagram and routing table output. The Student is unable to access Webserver.
 What is the cause of the problem and what is the solution for the problem?

- A. The first packet sent from Student failed the RPF check.This issue can be resolved by adding a static route to 10.0.4.0/24 through wan1.
