

MS-100 Dumps

Microsoft 365 Identity and Services

<https://www.certleader.com/MS-100-dumps.html>

NEW QUESTION 1

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You hire a new Microsoft 365 administrator named Nestor Wilke. Nestor Wilke will begin working for your organization in several days.

You need to ensure that Nestor Wilke is prevented from using his account until he begins working.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You need to sign-in status for the account to 'Blocked'. Blocking doesn't stop the account from receiving email and it doesn't delete any data.

- * 1. On the home page of the Microsoft 365 admin center, type the user's name into the Search box.
- * 2. Select the Nestor Wilke account in the search results.
- * 3. In the 'Sign-in status' section of the account properties, click the Edit link.
- * 4. Select 'Block the user from signing in' and click the Save button.

NEW QUESTION 2

- (Exam Topic 5)

You are developing an interactive invoicing application that will be used by end users. The application will have the following features:

- Save invoices generated by a user to the user's OneDrive for Business.
- Email daily automated reminders.

You need to identify which permissions to grant for the application features. The solution must use the principle of least privilege. Which permission type should you grant for each feature? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Save invoices:	<div>Administrator</div> <div>Application</div> <div>Delegated</div> <div>Super User</div>
Send automated reminders:	<div>Administrator</div> <div>Application</div> <div>Delegated</div> <div>Super User</div>

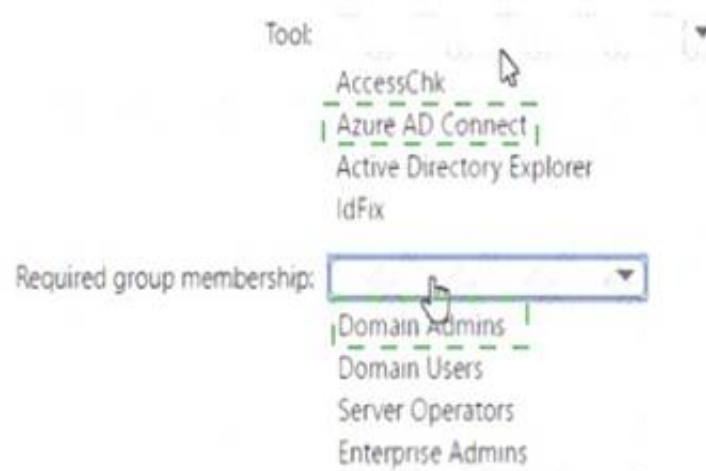

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Administrator
Application
Delegated
Super User

visit - <https://www.certleader.com>

Explanation:
Answer Area**NEW QUESTION 5**

- (Exam Topic 5)

You have a Microsoft 365 Enterprise E5 subscription.

You need to enforce multi-factor authentication on all cloud-based applications for the users in the finance department.

What should you do?

- A. Create an activity policy.
- B. Create a new app registration.
- C. Create a conditional access policy.
- D. Create a session policy.

Answer: C

Explanation:

You can configure a conditional access policy that applies to the Finance department users. The policy can be configured to 'Allow access' but with multi-factor authentication as a requirement.

The reference below explains how to create a conditional access policy that requires MFA for all users. To apply the policy to finance users only, you would select Users and Group in the Include section instead of All Users and then specify the finance department group.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/howto-conditional-access-policy-all>

NEW QUESTION 6

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

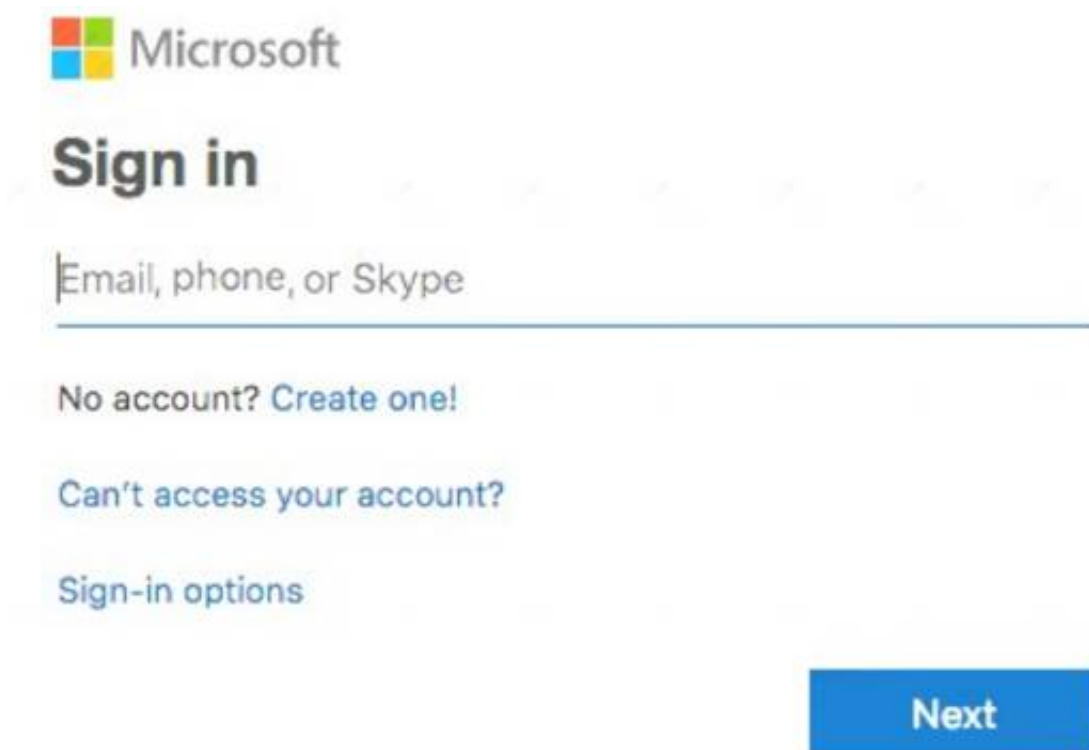

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

You need to ensure that all the users in your organization are prompted to change their password every 60 days. The solution must ensure that the users are reminded that their password must be changed 10 days before the required change.
To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You need to configure the Password Expiration Policy.

- * 1. Sign in to the Microsoft 365 Admin Center.
- * 2. In the left navigation pane, expand the Settings section then select the Settings option.
- * 3. Click on Security and Privacy.
- * 4. Select the Password Expiration Policy.
- * 5. Ensure that the checkbox labelled “Set user passwords to expire after a number of days” is ticked.
- * 6. Enter 60 in the “Days before passwords expire” field.
- * 7. Enter 10 in the “Days before a user is notified about expiration” field.
- * 8. Click the ‘Save changes’ button.

NEW QUESTION 7

- (Exam Topic 5)

You plan to migrate to SharePoint Online by using the SharePoint Migration Tool. Which list can be migrated to SharePoint Online?

Name	List template
List1	PictureLibrary
List2	Report Library
List3	Agenda
List4	AdminTasks

- A. List1
- B. List2
- C. List3
- D. List4

Answer: D

NEW QUESTION 8

- (Exam Topic 5)

Your company has a Microsoft 365 subscription and a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

An external vendor has a Microsoft account that has a username of user1@outlook.com. You plan to provide user1@outlook.com with access to several resources in the subscription.

You need to add the external user account to contoso.onmicrosoft.com. The solution must ensure that the external vendor can authenticate by using user1@outlook.com.

What should you do?

- A. From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify –UserPrincipalName user1@outlook.com.
- B. From the Microsoft 365 admin center, add a contact, and then specify user1@outlook.com as the email address.
- C. From the Azure portal, add a new guest user, and then specify user1@outlook.com as the email address.
- D. From the Azure portal, add a custom domain name, and then create a new Azure AD user and use user1@outlook.com as the username.

Answer: C

Explanation:

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is

added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate using that.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator>

NEW QUESTION 9

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a main office and three branch offices. All the branch offices connect to the main office by using a WAN link. The main office has a high-speed Internet connection. All the branch offices connect to the Internet by using the main office connections.

Users use Microsoft Outlook 2016 to connect to a Microsoft Exchange Server mailbox hosted in the main office.

The users report that when the WAN link in their office becomes unavailable, they cannot access their mailbox.

You create a Microsoft 365 subscription, and then migrate all the user data to Microsoft 365.

You need to ensure that all the users can continue to use Outlook to receive email messages if a WAN link fails.

Solution: You enable Cached Exchange Mode for all the Outlook profiles. Does this meet the goal?

A. Yes

B. No

Answer: B

NEW QUESTION 10

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain.

Your company has a security policy that prevents additional software from being installed on domain controllers.

You need to monitor a domain controller by using Microsoft Azure Advanced Threat Protection (ATP). What should you do? More than one choice may achieve the goal. Select the BEST answer.

A. Deploy an Azure ATP standalone sensor, and then configure port mirroring.

B. Deploy an Azure ATP standalone sensor, and then configure detections.

C. Deploy an Azure ATP sensor, and then configure detections.

D. Deploy an Azure ATP sensor, and then configure port mirroring.

Answer: C

Explanation:

If you're installing on a domain controller, you don't need a standalone ATP sensor. You need to configure the detections to detect application installations. With an ATP sensor (non-standalone), you don't need to configure port mirroring.

Reference:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/install-atp-step5> <https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-capacity-planning#choosing-the-right-sen>

NEW QUESTION 10

- (Exam Topic 5)

You have a backend service that will access the Microsoft Graph API. The backend service is hosted

on-premises. You need to configure the service to authenticate by using the most secure authentication method. What should you configure the service to use?

A. a client secret

B. a certificate

C. a hash

D. a shared key

Answer: B

NEW QUESTION 11

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain. The domain contains the users shown in the following table.

Name	Country	Organizational unit (OU)
User1	United States	OU1
User2	Canada	OU1
User3	United States	OU2

You have a Microsoft 365 subscription that is linked to an Azure Active Directory (Azure AD) tenant named contoso.com. You configure Azure AD Connect to sync the on-premises domain to contoso.com as shown in the following exhibit.

Answer Area

Statements	Yes	No
User1 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>
User2 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>
User3 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

Statements	Yes	No
User1 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>
User2 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>
User3 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>

NEW QUESTION 15

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- * Users must be able to authenticate during business hours only.
- * Authentication requests must be processed successfully if a single server fails.
- * When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- * Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that contains a pass-through authentication model. The solution contains two servers that have an Authentication Agent installed and password hash synchronization configured.

Does this meet the goal?

- A. Yes
B. No

Answer: B

Explanation:

This solution meets the following goals:

- Users must be able to authenticate during business hours only.
- Authentication requests must be processed successfully if a single server fails.
- When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.

However, the following goal is not met:

- Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

You would need to configure Single-sign on (SSO) to meet the last requirement. Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

NEW QUESTION 19

- (Exam Topic 5)

You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.

Name	Member of	Multi-Factor Auth Status
User1	Group1	Disabled
User2	Group1	Required

Multi-factor authentication (MFA) is configured to use 131.107.50/24 for trusted IPs. The tenant contains the named locations shown in the following table.

Name	IP address range	Trusted location
Location 1	131.107.20.0/24	Yes
Location 2	131.107.50.0/24	Yes

You create a conditional access policy that has the following configurations:

- Users and groups assignment: All users
- Cloud apps assignment: App1
- Conditions: Include all trusted locations
- Grant access: require multi-factor authentication

For each of the following statements, select Yes if the statement is true. otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
When User1 connects to App1 from a device that has an IP address of 131.107.50.10, User1 must use MFA.	<input type="radio"/>	<input type="radio"/>
When User2 connects to App1 from a device that has an IP address of 131.107.50.15, User2 must use MFA.	<input type="radio"/>	<input type="radio"/>
When User2 connects to App1 from a device that has an IP address of 131.107.5.5, User2 must use MFA.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: Yes

* 131.107.50.10 is in a Trusted Location so the conditional access policy applies. The policy requires MFA so User1 must use MFA.

Box 2: Yes.

* 131.107.50.15 is in a Trusted Location so the conditional access policy applies. The policy requires MFA so User2 must use MFA.

Box 3: No.

* 131.107.5.5 is not in a Trusted Location so the conditional access policy does not apply. Therefore, User2 does not need to use MFA.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition>

NEW QUESTION 22

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- * Users must be able to authenticate during business hours only.
- * Authentication requests must be processed successfully if a single server fails.
- * When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- * Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that uses password hash synchronization and seamless SSO. The solution contains two servers that have an Authentication Agent installed.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

NEW QUESTION 26

- (Exam Topic 5)

You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD).

Currently, App1 can read user profile information You need to allow App1 to read the user's calendar.

Solution: From the Azure portal, edit the API permission list for App1. Add the Microsoft Graph API and the Calendars-Read permissions and then grant tenant admin consent.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

NEW QUESTION 28

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You discover that some external users accessed content on a Microsoft SharePoint site. You modify the SharePoint sharing policy to prevent sharing outside your organization.

You need to be notified if the SharePoint policy is modified in the future.

Solution: From the Security & Compliance admin center, you create a threat management policy. Does this meet the goal?

A. Yes

B. No

Answer: A

Explanation:

We can create a threat management policy to alert us when the sharing policy is changed.

Create a new Alert policy > under Category select Threat Management > under 'Activity is' scroll down to the 'Site administration activities' and select 'Changed a sharing policy'.

NEW QUESTION 31

- (Exam Topic 5)

Your company has a Microsoft 365 subscription that contains the following domains: Contoso.onmicrosoft.com

Contoso.com

You plan to add the following domains to Microsoft 365 and to use them with Exchange Online:

➤ Sub1.contoso.onmicrosoft.com

➤ Sub2.contoso.com

➤ Fabrikam.com

You need to identify the minimum number of DNS records that must be added for Exchange Online to receive inbound email messages for the three domains.

How many DNS records should you add? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

MX records:

	▼
0	
1	
2	
3	

CNAME records:

	▼
0	
1	
2	
3	

A. Mastered

B. Not Mastered

Answer: A

Explanation:

Box 1: 2

You don't need to verify Sub1.contoso.onmicrosoft.com because the onmicrosoft.com domain and DNS is managed by Microsoft. You also don't need to configure an MX record for Sub1.contoso.onmicrosoft.com because that will be done by Microsoft.

For sub2.contoso.com, you don't need to verify the domain because you have already verified its parent domain contoso.com. However, you do need an MX record to direct email for that domain to Exchange Online.

For Fabrikam.com, you will need to verify the domain. You will need an MX record to direct email for that domain to Exchange Online.

Box 2: 0

You 'should' create CNAME records for autodiscover to point your email clients to Exchange Online to connect to the mailboxes. However, you don't have to.

You could configure the email client manually. Therefore, the minimum number of CNAME records required is zero.

NEW QUESTION 36

- (Exam Topic 5)

You have a Microsoft 365 subscription.

Your company deploys an Active Directory Federation Services (AD FS) solution. You need to configure the environment to audit AD FS user authentication.

Which two actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

A. From all the AD FS servers, run audltpol.exe.

B. From all the domain controllers, run the set-AdminAuditLogConfig cmdlet and specify the -LogiLevel parameter.

C. On a domain controller install Azure AD Connect Health for AD DS.

D. From the Azure AO Connect server, run the Register-AzureADConnectHealthSyncAgent cmdlet.

E. On an server, install Azure AD Connect Health for AD FS.

Answer: DE

Explanation:

To audit AD FS user authentication, you need to install Azure AD Connect Health for AD FS. The agent should be installed on an AD FS server. After the installation, you need to register the agent by running the Register-AzureADConnectHealthSyncAgent cmdlet.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-health-agent-install> <https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-health-adfs>

NEW QUESTION 41

- (Exam Topic 5)

You are developing a single-page application (SPA) that authenticates users by using MSALjs. The SPA must meet the following requirements:

- Only allow access to the users in an organization named contoso.onmicrosoft.com.
- Support single sign-on (SSO) across tabs and user sessions.

How should you complete the code for the SPA? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

NEW QUESTION 46

- (Exam Topic 5)

Your company has on-premises servers and a Microsoft Azure Active Directory (Azure AD) tenant. Several months ago, the Azure AD Connect Health agent was installed on all the servers.

You review the health status of all the servers regularly.

Recently, you attempted to view the health status of a server named Server1 and discovered that the server is NOT listed on the Azure Active Directory Connect Servers list.

You suspect that another administrator removed Server1 from the list. You need to ensure that you can view the health status of Server1.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. From Windows PowerShell, run the Register-AzureADConnectHealthSyncAgent cmdlet.
B. From Azure Cloud shell, run the Connect-AzureAD cmdlet.
C. From Server1, change the Azure AD Connect Health services Startup type to Automatic (Delayed Start).
D. From Server1, change the Azure AD Connect Health services Startup type to Automatic.
E. From Server1, reinstall the Azure AD Connect Health agent.

Answer: AE

Explanation:

question states that another administrator removed Server1 from the list. To view the health status of Server1, you need to re-register the AD Connect Health Sync

Agent. You can do this manually by running the Register-AzureADConnectHealthSyncAgent cmdlet. Alternatively, you can reinstall the Azure AD Connect Health agent. The Azure AD Connect Health agent is registered as part of the installation.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-health-agent-install>

NEW QUESTION 47

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a hybrid deployment of Microsoft 365 that contains the objects shown in the following table.

Name	Type	Source
User1	User	Azure Active Directory (Azure AD)
User2	User	Windows Server Active Directory
Group1	Group	Cloud
Group2	Group	Windows Server Active Directory

Azure AD Connect has the following settings:

- Password Hash Sync: Enabled
- Password writeback: Enabled
- Group writeback: Enabled

You need to add User2 to Group 2.

Solution: You use the Security & Compliance admin center. Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 51

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain named contoso.com that is synced to a Microsoft Azure Active Directory (Azure AD) tenant.

The on-premises network contains a file server named Server1. Server1 has a share named Share1 that contains company documents.

Your company purchases a Microsoft 365 subscription.

You plan to migrate data from Share1 to Microsoft 365. Only data that was created or modified during the last three months will be migrated.

You need to identify all the files in Share1 that were modified or created during the last 90 days. What should you use?

- A. Server Manager
- B. Microsoft SharePoint Migration Tool
- C. Resource Monitor
- D. Usage reports from the Microsoft 365 admin center

Answer: B

Explanation:

You can use the Microsoft SharePoint Migration Tool to migrate files from a file server to SharePoint Online. The Microsoft SharePoint Migration Tool has a number of filters you can use to define which files will be

migrated. One filter setting is "Migrate files modified after". This setting will only migrate files modified after the selected date.

The first phase of a migration is to perform a scan of the source files to create a manifest of the files that will be migrated. You can use this manifest to identify all the files in Share1 that were modified or created during the last 90 days.

References:

<https://docs.microsoft.com/en-us/sharepointmigration/spmt-settings>

NEW QUESTION 53

- (Exam Topic 5)

You plan to deploy Microsoft Teams to 2,500 users.

You need to estimate the internet bandwidth required for the deployment. What should you use?

- A. Advisor for Teams
- B. Network planner
- C. Skype for Business Server Remote Connectivity Test
- D. Microsoft Remote Connectivity Analyzer

Answer: B

Explanation:

From: <https://docs.microsoft.com/en-us/microsoftteams/network-planner>

Network Planner is a new tool that is available in the Teams admin center. It can be found by going to Planning > Network planner. In just a few steps, the Network Planner can help you determine and organize network requirements for connecting Microsoft Teams users across your organization. When you provide your network details and Teams usage, the Network Planner calculates your network requirements for deploying Teams and cloud voice across your organization's physical locations.

NEW QUESTION 54

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You view the service advisories shown in the following exhibit.

The screenshot shows the Microsoft Service Health dashboard. At the top, it says 'Home > Service health'. Below that, a banner states 'Some services have posted advisories' with a timestamp of '2018-10-05 08:43(UTC)' and a 'View history' link. On the left, there is a sidebar with 'All services' selected, and 'Incidents' and 'Advisories' are also visible. The main area displays a list of services with their status:

Service	Status
Office 365 Portal	1 advisory
SharePoint Online	1 advisory
Office Subscription	Service is healthy
Microsoft Intune	Service is healthy
Microsoft StaffHub	Service is healthy
Microsoft Teams	Service is healthy
Mobile Device Management for Office 365	Service is healthy
Azure Information Protection	Service is healthy
Exchange Online	Service is healthy

You need to ensure that users who administer Microsoft SharePoint Online can view the advisories to investigate health issues. Which role should you assign to the users?

- A. SharePoint administrator
- B. Message Center reader
- C. Reports reader
- D. Service administrator

Answer: D

Explanation:

People who are assigned the global admin or service administrator role can view service health. To allow Exchange, SharePoint, and Skype for Business admins to view service health, they must also be assigned the Service admin role. For more information about roles that can view service health.

Reference:

<https://docs.microsoft.com/en-us/office365/enterprise/view-service-health>

NEW QUESTION 59

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You need to implement Windows Defender Advanced Threat Protection (ATP) for all the supported devices enrolled devices enrolled on mobile device management (MDM).

What should you include in the device configuration profile? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Platform:

▼
Android
iOS
Windows 10 and later
Windows 8.1 and later

Settings:

▼
Offboard package
Onboard package
Windows Defender Application Guard
Windows Defender Firewall

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You can integrate Microsoft Defender Advanced Threat Protection (Microsoft Defender ATP) with Microsoft Intune as a Mobile Threat Defense solution. Integration can help you prevent security breaches and limit the impact of breaches within an organization. Microsoft Defender ATP works with devices that run Windows 10 or later.

When you establish a connection from Intune to Microsoft Defender ATP, Intune receives a Microsoft Defender ATP onboarding configuration package from Microsoft Defender ATP. This package is deployed to devices by using a device configuration profile.

Reference:

<https://docs.microsoft.com/en-us/intune/advanced-threat-protection>

NEW QUESTION 60

- (Exam Topic 5)

You publish an enterprise application named App1 that process financial data.

You need to ensure that access to App1 is revoked for users who no longer require view the processed financial data.

What should you configure?

- A. An access review
- B. An app protection policy
- C. A conditional access policy
- D. An owner

Answer: A

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/governance/create-access-review>

NEW QUESTION 62

- (Exam Topic 5)

Your company is based in the United Kingdom (UK).

Users frequently handle data that contains Personally Identifiable Information (PII).

You create a data loss prevention (DLP) policy that applies to users inside and outside the company. The policy is configured as shown in the following exhibit.

The screenshot shows the 'Review your settings' step of the 'New DLP policy' wizard. The policy is named 'U.K. Personally Identifiable Information (PII) Data' and applies to Exchange email, SharePoint sites, and OneDrive accounts. The policy settings state that if content contains sensitive info like UK NINO or US/UK passport numbers, users will be notified with a policy tip and email message. If there are at least 10 instances of the same type of sensitive info, access will be blocked and an incident report sent, but users can override the policy. The policy is set to be turned on after creation.

Use the drop-down menus to select the answer choice that completes each statement based in the information presented in the information presented in the graphic.

NOTE: Each correct selection is worth one point.

If a user attempts to upload a document to a Microsoft SharePoint site, and the document contains one UK passport number, the document will be [answer choice].

▼
allowed
blocked without warning
blocked, but the user can override the policy

If a user attempts to email 100 UK passport numbers to a user in the same company, the email message will be [answer choice].

▼
allowed
blocked without warning
blocked, but the user can override the policy

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The text in the Policy Settings section of the exhibit explains what will happen.

If a user sends between 1 and 10 instances of the sensitive info (passport number), then a notification email and will be sent to the user and a policy tip will be displayed. The email will not be blocked though. Therefore, it will be allowed.

If a user sends more than 10 instances of the sensitive info (passport number), the email will be blocked and a high-severity alert generated. However, the user can override the block.

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies>

NEW QUESTION 65

- (Exam Topic 5)

You work at a company named Contoso, Ltd.

Contoso has a Microsoft 365 subscription that is configured to use the DNS domains shown in the following table.

Name	Can enroll devices
Contoso.com	Yes
Contoso.onmicrosoft.com	Yes

Contoso purchases a company named Fabrikam, Inc.

Contoso plans to add the following domains to the Microsoft 365 subscription:

➤ fabrikam.com

➤ east.fabrikam.com

➤ west.contoso.com

You need to ensure that the devices in the new domains can register by using Autodiscover.

How many domains should you verify, and what is the minimum number of enterpriseregistration DNS records you should add? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Domains:

1

2

3

Enterpriseregistration DNS records:

1

2

3

NEW QUESTION 66

- (Exam Topic 5)

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com that includes a user named User1.

You enable multi-factor authentication for contoso.com and configure the following two fraud alert settings: ➤ Set Allow users to submit fraud alerts: On

➤ Automatically block users who report fraud: On

You need to instruct the users in your organization to use the fraud reporting features correctly. What should you tell the users to do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

A user can report fraud on her account by:

▼
Typing a special code after receiving an alert call
Sending an email message to an administrator
Using the Microsoft Authenticator app

If User1 reports fraud on his account, the account will be blocked automatically for:

▼
6 hours

1 day

7 days

90 days

A. Mastered

B. Not Mastered

Answer: A

Explanation:

Code to report fraud during initial greeting: When users receive a phone call to perform two-step verification, they normally press # to confirm their sign-in. To report fraud, the user enters a code before pressing #. This code is 0 by default, but you can customize it.

Block user when fraud is reported: If a user reports fraud, their account is blocked for 90 days or until an administrator unblocks their account. An administrator can review sign-ins by using the sign-in report, and take appropriate action to prevent future fraud. An administrator can then unblock the user's account.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-mfa-mfasettings#fraud-alert>

NEW QUESTION 68

- (Exam Topic 5)

You have a Microsoft 365 subscription

You have an Azure AD tenant that contains the users shown in the following table.

Name	Role
User1	Security administrator
User2	Global administrator
User3	Service support administrator

You configure Tenant properties as shown in the following exhibit

Technical contact: User1@contoso.com ✓

Global privacy contact: ✓

Privacy statement URL: http://contoso.com/privacy ✓

Which users will be contacted by Microsoft if the tenant experiences a data breach?

- A. User1 only
- B. User2 only
- C. User3 only
- D. User1 and User2 only
- E. User2 and User3 only

Answer: A

NEW QUESTION 71

- (Exam Topic 5)

Your company has a Microsoft 365 tenant named litwareinc.com.

The Guest access settings in Microsoft Teams are configured as shown in the following exhibit.

Guest access

Guest access in Teams lets people outside your organization access teams and channels. When you turn on Guest Access, you can turn on or off features guest users can or can't use. Make sure to follow the steps in this [checklist](#) to set up the prerequisites and so Team owners can add guest users to their teams. [Learn more](#)

Allow guest access in Teams

On

Calling

Manage calling specific controls for guest users.

Make private calls

On

Meeting

Turn on or turn off settings for guests in meetings.

Allow IP video

On

Screen sharing mode

Entire screen

Allow Meet Now

On

The External access settings in Microsoft Teams are configured as shown in the following exhibit.

External access

External access lets your Teams and Skype for Business users communicate with other users that are outside of your organization. By default, your organization can communicate with all external domains. If you add blocked domains, all other domains will be allowed but if you add allowed domains, all other domains will be blocked. [Learn more](#)

Users can communicate with other Skype for Business and Teams users

Discard

The company has a third-party supplier named adventureworks.com. Users in litwareinc.com collaborate with the following users by using Microsoft Teams:

- > User1@contoso.com
- > User2@adventureworks.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User2@adventureworks.com can share files by using a Microsoft Teams channel of litwareinc.com.	<input type="radio"/>	<input type="radio"/>
User1@contoso.com can use Meet now in Microsoft Teams.	<input type="radio"/>	<input type="radio"/>
Litwareinc.com users can block user1@contoso.com in Microsoft Teams.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Graphical user interface, text, application Description automatically generated

The answer to this question depends on whether User1 and User2 have been added as guests. The question does not say that they are guests so we would have to assume they're not.

External Access is turned off. Even with the Contoso.com domain added as an allowed domain, the Off settings override this. If the external access settings were 'On', they would be on for only the Contoso.com domain.

Box 1: No

If External Access was On, the answer to this would still be No. If User2 was a guest, the answer to this would be Yes.

Box 2: No

If External Access was On, the answer to this would still be No. External Access does not enable Meet Now for the external user. If User1 was a guest, the answer to this would be Yes.

Box 3: No

If External Access was On, the answer to this would still be No. External Access does not allow blocking. If User1 was a guest, the answer to this would be Yes.

Reference:

<https://docs.microsoft.com/en-us/microsoftteams/set-up-guests>

<https://docs.microsoft.com/en-us/microsoftteams/communicate-with-users-from-other-organizations>

NEW QUESTION 72

- (Exam Topic 5)

You have a Microsoft 365 subscription that uses an Azure AD tenant named contoso.com. The tenant contains the user's shown in the following table.

Name	Role
User1	Report reader
User2	User administrator
User3	Security administrator
User4	Global administrator

From the Sign-ins blade of the Azure Active Directory admin center, for which users can User1 and User2 view the sign-ins? To answer, select the appropriate options in the answer area.

Answer Area

User1 can view the sign-ins for the following users:

User2 can view the sign-ins for the following users:

User2 can view the sign-ins for the following users:

These are the selections for User2 can view the sign-ins for the following users:

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Answer Area

NEW QUESTION 74

- (Exam Topic 5)

You have a Microsoft 365 subscription and a DNS domain. The domain is hosted by a third-party DNS service.

You plan to add the domain to the subscription.

You need to use Microsoft Exchange Online to send and receive emails for the domain.

Which type of DNS record should you add to the DNS zone of the domain for each task? To answer, drag the appropriate records to the correct tasks. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

A

CNAME

MX

SRV

TXT

Route email for the domain to Exchange Online

Enable Microsoft Outlook to auto discover the Exchange Online server for the domain.

Help prevent spam for the domain.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1: MX

When you update your domain's MX record, all new email for anyone who uses your domain will now come to Microsoft 365.

Box 2: CNAME

Add CNAME records to connect other service. You can add CNAME records for each service that you want to connect.

Box 3: TXT

Add or edit an SPF TXT record to help prevent email spam Reference:

<https://docs.microsoft.com/en-us/microsoft-365/admin/get-help-with-domains/create-dns-records-at-any-dns-hos>

NEW QUESTION 77

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has 3,000 users. All the users are assigned Microsoft 365 E3 licenses.

Some users are assigned licenses for all Microsoft 365 services. Other users are assigned licenses for only certain Microsoft 365 services.

You need to determine whether a user named User1 is licensed for Exchange Online only. Solution: You run the Get-MsolUser cmdlet.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

The Get-MsolUser cmdlet will tell you if a user is licensed for Microsoft 365 but it does not tell you which licenses are assigned.

Reference:

<https://docs.microsoft.com/en-us/powershell/module/msonline/get-msoluser?view=azureadps-1.0>

NEW QUESTION 78

- (Exam Topic 5)

Your company has 500 client computers that run Windows 10.

You plan to deploy Microsoft Office 365 ProPlus to all the computers. You create the following XML file for the planned deployment.

```
<Configuration>
  <Add OfficeClientEdition="64" Channel="Broad" ForceUpgrade="TRUE">
    <Product ID="0365ProPlusRetail">
      <Language ID="en-us"/>
      <ExcludeApp ID="Groove"/>
      <ExcludeApp ID="Publisher"/>
    </Product>
  </Add>
  <Updates Enabled="TRUE" Channel="Broad" Deadline="03/31/2019, 00:00"
UpdatePath="\\sccm\updates"/>
  <Display Level="Full" AcceptEULA="TRUE"/>
  <Property Name="FORCEAPPSHUTDOWN" Value="TRUE"/>
  <Property Name="SharedComputerLicensing" Value="0"/>
  <Property Name="PinIconsToTaskbar" Value="TRUE"/>
</Configuration>
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.

When the installation is complete [answer choice].

all users will be prompted to accept the EULA
all users will be prompted to install several updates
all semi-channel updates will be installed automatically

Office 365 ProPlus will [answer choice].

include Microsoft OneDrive for Business and Microsoft Outlook only
be installed on all the computers
be installed only on the computers that run a 64-bit version of Windows 10

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Box 1:

When the installation is complete, all users will be prompted to install several updates.

In the configuration file, the Updates Enabled element is set to True. This means that Office will check for updates after the installation.

The Channel element set to Broad means that all semi-annual channel updates will be installed. Box 2:

Office 365 ProPlus will be installed only on the computers that run a 64-bit version of Windows 10.

The OfficeClientEdition element defines whether the 32-bit or 64-bit edition of Office 365 ProPlus is downloaded or installed. In the configuration file, it is set to '64'. The 64-bit version will only install on a 64-bit client computer.

<https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool>

NEW QUESTION 82

- (Exam Topic 5)

You are developing a SharePoint Framework (SPFx) solution.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
Field Customizer extensions be used to change the rendering of a field.	<input type="radio"/>	<input type="radio"/>
Field Customizer extensions can use the Server-Side Object Model.	<input type="radio"/>	<input type="radio"/>
Field Customizer extensions can use client-side libraries such as AngularJS and React.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Graphical user interface, text, application, chat or text message Description automatically generated

Reference:

<https://docs.microsoft.com/en-us/sharepoint/dev/spfx/extensions/get-started/building-simple-field-customizer#en> <https://www.spguides.com/spfx-application-customizer/>

NEW QUESTION 83

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You plan to provide an external user named fabrikamuser@fabrikam.com with access to several resources in your Microsoft 365 tenant.

You need to ensure that the external user can be added to Office 365 groups.

A. Mastered

B. Not Mastered

Answer: A

Explanation:

You need to create a guest account for the external user.

- * 1. Go to the Azure Active Directory admin center.
- * 2. Select Users.
- * 3. Click the 'New guest user' link.
- * 4. Select the 'Invite user' option.
- * 5. Give the account a name and enter fabrikamuser@fabrikam.com in the email address field.
- * 6. Click the 'Invite' button. References:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/b2b-quickstart-add-guest-users-portal>

NEW QUESTION 85

- (Exam Topic 5)

You create a Microsoft 365 Enterprise subscription. You assign licenses for all products to all users.

You need to ensure that all Microsoft Office 365 ProPlus installations occur from a network share. The solution must prevent the users from installing Office 365 ProPlus from the Internet.

Which three actions should you perform? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

- A. From your computer, run setup.exe /download downloadconfig.xml.
- B. Create an XML download file.
- C. From the Microsoft 365 admin center, deactivate the Office 365 licenses for all the users.
- D. From each client computer, run setup.exe /configure installconfig.xml.
- E. From the Microsoft 365 admin center, configure the Software download settings.

Answer: BDE

Explanation:

You can use the Office Deployment Tool (ODT) to download the installation files for Office 365 ProPlus from a local source on your network instead of from the Office Content Delivery Network (CDN).

The first step is to create the configuration file. You can download an XML template file and modify that. The next step to install Office 365 ProPlus is to run the ODT executable in configure mode with a reference to the configuration file you just saved. In the following example, the configuration file is named installconfig.xml. setup.exe /configure installconfig.xml

After running the command, you should see the Office installation start.

To prevent the users from installing Office 365 ProPlus from the Internet, you need to configure the Software download settings (disallow downloads) in the Microsoft 365 admin center.

<https://docs.microsoft.com/en-us/deployoffice/overview-of-the-office-2016-deployment-tool#download-the-inst>

NEW QUESTION 90

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- Users must be able to authenticate during business hours only.
- Authentication requests must be processed successfully if a single server fails.
- When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that uses federation authentication by using Active Directory Federation Services (AD FS). The solution contains two AD FS servers and two Web Application Proxies.

Does this meet the goal?

- A. Yes
B. No

Answer: B

Explanation:

This solution meets the following requirements:

- Users must be able to authenticate during business hours only.
- Authentication requests must be processed successfully if a single server fails.
- When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.

The following requirement is not met:

- Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

To meet this requirement, you would need to configure seamless Single Sign-on (SSO) Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

NEW QUESTION 94

- (Exam Topic 5)

You create a Microsoft 365 subscription.

You plan to deploy Microsoft Office 365 ProPlus applications to all the client computers at your company. You prepare the following XML file for the planned deployment.

```
<Configuration>
  <Add OfficeClientEdition="32"
    Channel="Broad">
    <Product ID="0365ProPlusRetail">
      <Language ID="en-us" />
    </Product>
  </Add>
  <Updates Enabled="TRUE"
    UpdatePath=""
    Channel="Targeted" />
  <Display Level="None"
    AcceptEULA="TRUE" />
</Configuration>
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Office 365 ProPlus feature updates will be installed [answer choice].

▼
once a month
once every six months
once a year

Office 365 ProPlus security updates will be installed [answer choice].

▼
once a month
every six months in January and July
every six months in March and September

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool#updates> <https://docs.microsoft.com/en-us/deployoffice/overview-of-update-channels-for-office-365-proplus>

NEW QUESTION 98

- (Exam Topic 5)

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com. You purchase a domain named contoso.com from a registrar and add all the required DNS records.

You create a user account named User1. User1 is configured to sign in as user1@contoso.onmicrosoft.com. You need to configure User1 to sign in as user1@contoso.com.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
Run Set-MsolDomainAuthentication - TenantID contoso.com	
Modify the email address of User1.	
Modify the username of User1.	
Verify the custom domain.	
Add a contoso.com as a SAN for an X.509 certificate.	
Add a custom domain name.	

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

The first step is to add the contoso.com domain to Office 365. You do this by adding a custom domain. When you add a custom domain to office 365, you can use the domain as your email address or to sign in to Office 365.

The second step is to verify the custom domain. This is to prove that you own the domain. You can verify the custom domain by adding a DNS record to the domain DNS zone.

When you have added and verified the domain, you can configure the user accounts to use it. To configure User1 to sign in as user1@contoso.com, you need to change the username of User1. In Office 365, the username is composed of two parts. The first part is the actual username (User1) and the second part is the domain. You need to modify the username of User1 by selecting the contoso.com domain from the dropdown list of domains. The dropdown list of domains contains the <domain>.onmicrosoft.com domain and any custom domains that have been added.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/setup/add-domain?view=o365-worldwide>

NEW QUESTION 100

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@M365x981607.onmicrosoft.com Microsoft 365 Password: *yfLo7lr2&yIf the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to provide several users in your organization with the ability to join their Windows 10 device to Microsoft Azure Active Directory (Azure AD).

You need to ensure that all the users who join a device use multi-factor authentication.

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

You need to configure the device settings in Azure Active Directory.

- * 1. Go to the Azure Active Directory admin center.
- * 2. Select Azure Active Directory.
- * 3. Select Devices.
- * 4. Select Device Settings.
- * 5. Toggle the 'Require Multi-Factor Auth to join devices' setting to Yes.
- * 6. Click Save to save the changes. References:

<https://docs.microsoft.com/en-us/azure/active-directory/devices/device-management-azure-portal>

Use the drop-down menus to select the answer choice that completes each statement based on the information in the graphic.
NOTE: Each correct selection is worth one point.

Policy1 will trigger an alert if malware is detected in [answer choice].

Exchange Online only

SharePoint Online only

SharePoint Online or OneDrive only

Exchange Online, SharePoint Online, or OneDrive

The maximum number of email messages that Policy1 will generate per day is [answer choice].

5

12

20

100

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

The 'Activity is' setting is configured as 'Detected malware in file'. This setting means the policy is applied to files stored in SharePoint or OneDrive. The Aggregation settings has a 120 minute window. This means that if there 20 detections in 120 minutes, an email will be generated. Therefore, the maximum number of emails generated in 24 hours is 12.

Lab Instance: 11440873

You need to add Adele Vance to a group named Managers. The solution must ensure that you can grant permissions to Managers. To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You need to create a group named Managers and add Adele Vance to the group. To ensure that you can grant permissions to the Managers group, the group needs to be a Security Group.

- * 1. Sign in to the Microsoft 365 Admin Center.
- * 2. In the left navigation pane, expand the Groups section then select Groups.
- * 3. Click the 'Add a group' link.
- * 4. For the group type, select Security and click Next.
- * 5. Enter 'Managers' in the Name field and click Next.
- * 6. Click the 'Create Group' button to create the Managers group.
- * 7. In the list of groups, select the Managers group.
- * 8. Click the Members link.
- * 9. Click the 'View all and manage members link'.
- * 10. Click the 'Add Members' button.
- * 11. Select Adele Vance and click the Save button.
- * 12. Click the Close button to close the group page.

NEW QUESTION 108

- (Exam Topic 5)

You implement Microsoft Azure Advanced Threat Protection (Azure ATP). You have an Azure ATP sensor configured as shown in the following exhibit. Updates

Updates

Domain controller restart
during updates

NAME	TYPE	VERSION	AUTOM...	DELAYE...	STATUS
LON-DC1	Sensor	2.48.5521	 on	 on	Up to date

Save

How long after the Azure ATP cloud service is updated will the sensor update?

- A. 1 hour
- B. 7 days
- C. 48 hours
- D. 12 hours
- E. 72 hours

Answer: E

Explanation:

References:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-whats-new> The exhibit shows that the sensor is configure for Delayed update.

Given the rapid speed of ongoing Azure ATP development and release updates, you may decide to define a subset group of your sensors as a delayed update ring, allowing for a gradual sensor update process. Azure

ATP enables you to choose how your sensors are updated and set each sensor as a Delayed update candidate.

Sensors not selected for delayed update are updated automatically, each time the Azure ATP service is updated. Sensors set to Delayed update each service update.

Reference:

are updated on a delay of 72 hours, following the official release of

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/sensor-update>

NEW QUESTION 112

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains a guest user named User1. User1 is assigned the User administrator role.

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. Contoso.com is configured as shown in the following exhibit.

External collaboration settings

Save Discard

Guest users permissions are limited ⓘ

Yes No

Admins and users in the guest inviter role can invite ⓘ

Yes No

Members can invite ⓘ

Yes No

Guests can invite ⓘ

Yes No

Collaboration restrictions

- ☒ Allow invitations to be sent to any domain (most inclusive)
- ☐ Deny invitations to the specified domains
- ☐ Allow invitations only to the specified domains (most restrictive)

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.

User1 can [answer choice].

open the Azure portal only
open the Azure portal and view users only
open the Azure portal, view users, and create new guest users only
open the Azure portal, view users, create new users, and create new guest users

All other guest users can [answer choice].

open the Azure portal only
open the Azure portal and view users only
open the Azure portal, view users, and create new guest users only
open the Azure portal, view users, create new users, and create new guest users

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Default permissions for guests are restrictive by default. Guests can be added to administrator roles, which grant them full read and write permissions contained in the role. There is one additional restriction available, the ability for guests to invite other guests. Setting Guests can invite to No prevents guests from inviting other guests.

User1 is assigned the User Administrator role. Therefore, User1 can open the Azure portal, view users, create new users, and create new guest users.

In the exhibit, the 'Guest user permissions are limited' is set to no. This means that guest users have the same permissions as members. However, the 'Guests can invite' setting is set to No. Therefore, other guest users (all guest users except User1) can open the Azure portal and view users in the same way as member users can.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations> <https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/users-default-permissions>

NEW QUESTION 117

- (Exam Topic 5)

Your on-permission network contains the web application shown in the following table.

Name	Hosted on server
App1	Web1
App2	Web1
App3	Web2
App4	Web2

You purchase Microsoft 365, and the implement directory synchronization. You plan to publish the web applications.

You need to ensure that all the applications are accessible by using the My Apps portal. The solution must minimize administrative effort.

What should you do first?

- A. Deploy one conditional access policy.
B. Deploy one Application Proxy connector.
C. Create four application registrations.
D. Create a site-to-site VPN from Microsoft Azure to the on-premises network.

Answer: B

Explanation:

The Application Proxy connector is what connects the on-premises environment to the Azure Application Proxy.

Application Proxy is a feature of Azure AD that enables users to access on-premises web applications from a remote client. Application Proxy includes both the Application Proxy service which runs in the cloud, and the Application Proxy connector which runs on an on-premises server. Azure AD, the Application Proxy service, and the Application Proxy connector work together to securely pass the user sign-on token from Azure AD to the web application.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy>

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-connectors>

NEW QUESTION 118

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You discover that some external users accessed content on a Microsoft SharePoint site. You modify the SharePoint sharing policy to prevent sharing outside your organization.

You need to be notified if the SharePoint policy is modified in the future. Solution: From the SharePoint admin center, you modify the sharing settings. Does this meet the goal?

- A. Yes
B. No

Answer: B

Explanation:

You need to create a threat management policy in the Security & Compliance admin center.

NEW QUESTION 120

- (Exam Topic 5)

You are building a Microsoft Office Add-in for Outlook that will use the Microsoft Graph REST API to retrieve a users documents from a Microsoft SharePoint Online site. What should the add-in provide to retrieve the documents on behalf of the user?

- A. a refresh token
- B. an identity token
- C. a single sign-on (SSO) token
- D. an access token

Answer: D

NEW QUESTION 122

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory forest named contoso.com. The forest contains the following domains:

> Contoso.com

> East.contoso.com

An Azure AD Connect server is deployed to contoso.com. Azure AD Connect syncs to an Azure Active Directory (Azure AD) tenant.

You deploy a new domain named west.contoso.com to the forest.

You need to ensure that west.contoso.com syncs to the Azure AD tenant.

Solution: You install a new Azure AD Connect server in west.contoso.com and set AD Connect to staging mode.

Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 123

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant. Solution: You use Dashboard in Security & Compliance.

Does this meet the goal?

- A. Yes
- B. NO

Answer: B

Explanation:

Depending on what your organization's Office 365 subscription includes, the Dashboard in Security & Compliance includes several widgets, such as Threat Management Summary, Threat Protection Status, Global Weekly Threat Detections, Malware, etc. It does not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.

To meet the goal, you need to use Message center in the Microsoft 365 admin center.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/security-dashboard> <https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide>

NEW QUESTION 127

- (Exam Topic 5)

Your Network contains an on-premises Active Directory domain named contoso.local. The domain contains five domain controllers.

Your company purchases Microsoft 365 and creates a Microsoft Azure Active Directory (Azure AD) tenant named .contoso.onmicrosoft.com.

You plan to implement pass-through authentication.

You need to prepare the environment for the planned implementation of pass-through authentication. Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Modify the email address attribute for each user account.
- B. From the Azure portal, add a custom domain name.
- C. From Active Directory Domains and Trusts, add a UPN suffix.
- D. Modify the User logon name for each user account.
- E. From the Azure portal, configure an authentication method.
- F. From a domain controller, install an authentication Agent.

Answer: BCF

Explanation:

To implement pass-through authentication, you need to install and configure Azure AD Connect.

The on-premise Active Directory domain is named contoso.local. Before you can configure Azure AD Connect, you need to purchase a routable domain, for example, contoso.com.

You then need to add the domain contoso.com to Microsoft as a custom domain name.

The user accounts in the Active Directory domain need to be configured to use the domain name contoso.com as a UPN suffix. You need to add contoso.com to the Active Directory first by using Active Directory Domains and Trusts to add contoso.com add a UPN suffix. You can then configure each account to use the new UPN suffix.

An Authentication Agent is required on a domain controller to perform the authentication when pass-through authentication is used. When the custom domain and user accounts are configured, you can install and configure Azure AD Connect. An Authentication Agent is installed when you select the pass-through authentication option in the Azure AD Connect configuration or you can install the Authentication Agent manually.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-pta-quick-start>

NEW QUESTION 129

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant. Solution: You use the Service health option in the Microsoft 365 admin center.

Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/enterprise/view-service-health?view=o365-worldwide>

NEW QUESTION 131

- (Exam Topic 5)

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com that contains a user named User1.

You suspect that an imposter is signing in to Azure AD by using the credentials of User1.

You need to ensure that an administrator named Admin1 can view all the sign in details of User1 from the past 24 hours.

To which three roles should you add Admin1? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

A. Security administrator

B. Password administrator

C. User administrator

D. Compliance administrator

E. Reports reader

F. Security reader

Answer: AEF

Explanation:

Users in the Security Administrator, Security Reader, Global Reader, and Report Reader roles can view the sign in details.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-sign-ins>

NEW QUESTION 135

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

PROVISION FROM ACTIVE DIRECTORY

Azure AD Connect cloud provisioning

This feature allows you to manage provisioning from the cloud.

[Manage provisioning \(Preview\)](#)

Azure AD Connect sync

Sync Status	Enabled
Last Sync	Less than 1 hour ago
Password Hash Sync	Enabled

USER SIGN-IN

Federation	Disabled	0 domains
Seamless single sign-on	Enabled	1 domain
Pass-through authentication	Enabled	2 agents

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com. You need to ensure that User2 can access the resources in Azure AD.
Solution: From the on-premises Active Directory domain, you set the UPN suffix for User2 to @contoso.com. You instruct User2 to sign in as user2@contoso.com. Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

The on-premises Active Directory domain is named contoso.com. You can enable users to sign on using a different UPN (different domain), by adding the domain to Microsoft 365 as a custom domain. Alternatively, you can configure the user account to use the existing domain (contoso.com).

NEW QUESTION 138

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain.

You deploy a Microsoft Azure Active Directory (Azure AD) tenant. Another administrator configures the domain to synchronize to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.

You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.

You need to ensure that the 10 user accounts are synchronized to Azure AD. Solution: From Azure AD Connect, you modify the filtering settings.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering>

NEW QUESTION 142

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain named Contoso.com.

Your company purchase a Microsoft 365 subscription and establishes a hybrid deployment of Azure Active Directory (Azure AD) by using password hash synchronization.

You need to identify where an administrator can reset the password of each new user. What should you identify? To answer, select the appropriate option in the area. NOTE: Each correct selection is worth point.

Answer Area

User10:
☒ On-premises Active Directory only
☐ On-premises Active Directory or Azure AD

User20:
☐ On-premises Active Directory only
☒ On-premises Active Directory or Azure AD

- A. Mastered
B. Not Mastered

Answer: A

Explanation:**Answer Area**

User10:
☒ On-premises Active Directory only
☐ On-premises Active Directory or Azure AD

User20:
☐ On-premises Active Directory only
☒ On-premises Active Directory or Azure AD

NEW QUESTION 144

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You need to create a group named Group2. Users who are added to Group2 must be licensed automatically for Microsoft Office 365.

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

You need to create the group and assign a license to the group. Anyone who is added to the group will automatically be assigned the license that is assigned to the group.

- * 1. Go to the Azure Active Directory admin center.
- * 2. Select the Azure Active Directory link then select Groups.
- * 3. Click the New Group link.
- * 4. Select 'Security' as the group type and enter 'Group2' for the group name.
- * 5. Click the Create button to create the group.
- * 6. Back in the Groups list, select Group2 to open the properties page for the group.
- * 7. Select 'Licenses'.
- * 8. Select the '+ Assignments' link.
- * 9. Tick the box to select the license.
- * 10. Click the Save button to save the changes. References:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign>

NEW QUESTION 148

- (Exam Topic 5)

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant Solution: You review the Product Feedback in the Microsoft 365 admin center Does this meet the goal?

- A. Yes
- B. No

Answer: B

NEW QUESTION 153

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- * Users must be able to authenticate during business hours only.
- * Authentication requests must be processed successfully if a single server fails.
- * When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- * Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that uses password hash synchronization and seamless SSO. The solution contains two servers that have an Authentication Agent installed.

- A. Yes
- B. No

Answer: B

NEW QUESTION 156

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You need to modify Christie Cline to meet the following requirements:

- Christie Cline must be able to view the service dashboard and the Microsoft Office 365 Message center.
- Christie Cline must be able to create Microsoft support requests.
- The solution must use the principle of least privilege.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You need to assign Christie the 'Service Support Admin' role.

- * 1. In the Microsoft 365 Admin Center, click 'Roles'.
- * 2. Scroll down to the Service Support Admin role and click on the role name.
- * 3. Click the 'Assigned Admins' link.
- * 4. Click the 'Add' button.
- * 5. Start typing the name Christie then select her account when it appears.
- * 6. Click Save. References:

<https://docs.microsoft.com/en-US/azure/active-directory/users-groups-roles/directory-assign-admin-roles>

NEW QUESTION 159

- (Exam Topic 5)

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. You add an app named App1 to the enterprise applications in contoso.com.

You need to configure self-service for App1. What should you do first?

- A. Assign App1 to users and groups.
- B. Add an owner to App1.
- C. Configure the provisioning mode for App1.
- D. Configure an SSO method for App1.

Answer: C

Explanation:

The provisioning mode (manual or automatic) needs to be configured for an app before you can enable self-service application access.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/manage-self-service-access>

NEW QUESTION 162

- (Exam Topic 5)

Your network contain*, an on-premises Active Directory forest.

You are evaluating the implementation of Microsoft 365 and the deployment of authentication strategy. You need to recommend an authentication strategy that meets the following requirements:

- Allows users to sign in by using smart card-based certificates
- Allows users to connect to on premises and Microsoft 365 services by using SSO Which authentication strategy should you recommend?

- A. password hash synchronization and seamless SSO
- B. federation with Active Directory Federation Services (AD FS)
- C. pass-through authentication and seamless SSO

Answer: B

Explanation:

References:

Federation with Active Directory Federation Services (AD FS) is required to allow users to sign in by using smart card-based certificates.

Federated authentication

When you choose this authentication method, Azure AD hands off the authentication process to a separate trusted authentication system, such as on-premises Active Directory Federation Services (AD FS), to validate the user's password.

The authentication system can provide additional advanced authentication requirements. Examples are smartcard-based authentication or third-party multifactor authentication. Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

NEW QUESTION 163

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You have a group named Support. Users in the Support group frequently send email messages to external users.

The manager of the Support group wants to randomly review messages that contain attachments.

You need to provide the manager with the ability to review messages that contain attachments sent from the Support group users to external users. The manager must have access to only 10 percent of the messages.

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

To meet the goal for the manager, create:

<input type="checkbox"/>	A label policy
<input type="checkbox"/>	A retention policy
<input type="checkbox"/>	A supervisor policy
<input type="checkbox"/>	An alert policy
<input type="checkbox"/>	MyAnalytics

To review the messages, the manager must use:

<input type="checkbox"/>	A message trace
<input type="checkbox"/>	An eDiscovery case
<input type="checkbox"/>	MyAnalytics
<input type="checkbox"/>	Outlook Web App

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Supervision policies in Office 365 allow you to capture employee communications for examination by designated reviewers. You can define specific policies that capture internal and external email, Microsoft Teams, or 3rd-party communications in your organization.

You create supervision policies in the Compliance center. These policies define which communications and users are subject to review in your organization and specify who should perform reviews.

If you want to reduce the amount of content to review, you can specify a percentage of all the communications governed by a supervision policy. A real-time, random sample of content is selected from the total percentage of content that matches chosen policy conditions.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/supervision-policies>

NEW QUESTION 168

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant.

Solution: You review the Security & Compliance report in the Microsoft 365 admin center. Does this meet the goal?

A. Yes

B. No

Answer: B

Explanation:

The Security & Compliance reports in the Microsoft 365 admin center are reports regarding security and compliance for your Office 365 Services. For example, email usage reports, Data Loss Prevention reports etc. They do not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.

To meet the goal, you need to use Message center in the Microsoft 365 admin center.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/download-existing-reports>

NEW QUESTION 173

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant.

Solution: You use Reports from the Microsoft 365 compliance center. Does this meet the goal?

A. Yes

B. No

Answer: B

NEW QUESTION 178

- (Exam Topic 5)

You recently migrated your on-premises email solution to Microsoft Exchange Online and are evaluating which licenses to purchase.

You want the members of two groups named IT and Managers to be able to use the features shown in the following table.

Feature	Available to
Microsoft Azure Active Directory (Azure AD) conditional access	IT group, Managers group
Microsoft Azure Active Directory (Azure AD) Privileged Identity Management	IT group

The IT group contains 50 users. The Managers group contains 200 users.

You need to recommend which licenses must be purchased for the planned solution. The solution must minimize licensing costs.

Which licenses should you recommend?

A. 250 Microsoft 365 E3 only

B. 50 Microsoft 365 E 3 and 200 Microsoft 365 E5

C. 250 Microsoft 365 E5 only

D. 200 Microsoft 365 E3 and 50 Microsoft 365 E5

Answer: D

Explanation:

Microsoft Azure Active Directory Privileged Identity Management requires an Azure AD Premium P2 license. This license comes as part of the Microsoft 365 E5 license. Therefore, we need 50 Microsoft 365 E5 licenses for the IT group.

Conditional Access requires the Azure AD Premium P1 license. This comes as part of the Microsoft E3 license. Therefore, we need 200 Microsoft 365 E3 licenses for the Managers group.

NEW QUESTION 183

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

Next

You need to create a SharePoint site named Project1. Users from your organization must be able to share content from the site to external users. To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You need to create a SharePoint site and configure the sharing settings.

- * 1. Go to the SharePoint Admin Center.
- * 2. In the left navigation pane, expand Sites then select 'Active Sites'.
- * 3. Click on the '+ Create' link to add a new site.
- * 4. Select 'Other Options' then 'Team Site' for the template.
- * 5. Give the site the name 'Project1'.
- * 6. In the 'Primary Administrator' field, start typing 'admin' then select the admin@LODSe878763.onmicrosoft.com account when it appears.
- * 7. Click Finish to create the site.
- * 8. In the Active Sites list, select the Project1 site.
- * 9. Click the Sharing link at the top of the sites list.
- * 10. Under 'External Sharing', select 'Anyone'.
- * 11. Click Save to save the changes.

NEW QUESTION 184

- (Exam Topic 5)

Your company has a main office and 20 branch offices in North America and Europe. Each branch office connects to the main office by using a WAN link. All the offices connect to the Internet and resolve external host names by using the main office connections.

You plan to deploy Microsoft 365 and to implement a direct Internet connection in each office.

You need to recommend a change to the infrastructure to provide the quickest possible access to Microsoft 365 services.

What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. For all the client computers in the branch offices, modify the MTU setting by using a Group Policy object (GPO).
- B. In each branch office, deploy a proxy server that has user authentication enabled.
- C. In each branch office, deploy a firewall that has packet inspection enabled.
- D. In each branch office, configure name resolution so that all external hosts are redirected to public DNS servers directly.

Answer: D

Explanation:

Being a cloud service, Office 365 would be classed as an external host to the office computers.

All the offices connect to the Internet and resolve external host names by using the main office connections. This means that all branch office computers perform DNS lookups and connect to the Internet over the WAN link.

Each branch office will have a direct connection to the Internet so the quickest possible access to Microsoft 365 services would be by using the direct Internet connections. However, the DNS lookups would still go over the WAN links to main office. The solution to provide the quickest possible access to Microsoft 365 services is to configure DNS name resolution so that the computers use public DNS servers for external hosts. That way DNS lookups for Office 365 and the connections to Office 365 will use the direct Internet connections.

NEW QUESTION 185

- (Exam Topic 5)

Your company has an on-premises Microsoft Exchange Server 2013 organization. The company has 100 users.

The company purchases Microsoft 365 and plans to move its entire.- infrastructure to the cloud.

The company does NOT plan to sync the on-premises Active Directory domain to Microsoft Azure Active Directory (Azure AD). You need to recommend which type of migration to use to move all email messages, contacts, and calendar items to Exchange Online. What should you recommend?

- A. cutover migration
- B. IMAP migration
- C. remote move migration
- D. staged migration

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/exchange/mailbox-migration/cutover-migration-to-office-365>

A cutover migration and an IMAP migration do not require the company to sync the on-premises Active Directory domain to Microsoft Azure Active Directory (Azure AD). Only a cutover migration meets the requirements in this question.

With a cutover migration, user accounts will need to be created in Azure Active Directory for each user. The mailboxes are all migrated in one go and MX records configured to redirect email to Microsoft 365.

NEW QUESTION 186

- (Exam Topic 5)

You need to ensure that a user named User1 can create documents by using Office Online.

Which two Microsoft Office 365 license options should you turn on for User1? To answer, select the appropriate options in the answer area.

NOTE: Each correct section is worth one point.

Answer Area

License options

Microsoft Forms (Plan E5)	<input type="checkbox"/> Off	<input type="checkbox"/> On
Microsoft MyAnalytics (Full)	<input type="checkbox"/> Off	<input type="checkbox"/> On
Microsoft Planner	<input type="checkbox"/> Off	<input type="checkbox"/> On
Microsoft StaffHub	<input type="checkbox"/> Off	<input type="checkbox"/> On
Microsoft Stream for O365 E5 SKU	<input type="checkbox"/> Off	<input type="checkbox"/> On
Microsoft Teams	<input type="checkbox"/> Off	<input type="checkbox"/> On
Office 365 Advanced eDiscovery	<input type="checkbox"/> Off	<input type="checkbox"/> On
Office 365 Advanced Threat Protection (Plan 2)	<input type="checkbox"/> Off	<input type="checkbox"/> On
Office 365 Cloud App Security	<input type="checkbox"/> Off	<input type="checkbox"/> On
Office 365 Privileged Access Management	<input type="checkbox"/> Off	<input type="checkbox"/> On
Office 365 ProPlus	<input type="checkbox"/> Off	<input type="checkbox"/> On
Office Online	<input type="checkbox"/> Off	<input type="checkbox"/> On
Phone System	<input type="checkbox"/> Off	<input type="checkbox"/> On
Power BI Pro	<input type="checkbox"/> Off	<input type="checkbox"/> On
PowerApps for Office 365	<input type="checkbox"/> Off	<input type="checkbox"/> On
SharePoint Online (Plan 2)	<input type="checkbox"/> Off	<input type="checkbox"/> On
Skype for Business Online (Plan 2)	<input type="checkbox"/> Off	<input type="checkbox"/> On
Sway	<input type="checkbox"/> Off	<input type="checkbox"/> On
To-Do (Plan 3)	<input type="checkbox"/> Off	<input type="checkbox"/> On
Yammer Enterprise	<input type="checkbox"/> Off	<input type="checkbox"/> On

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

You need “Office Online” to be able to create documents by using Office Online. You also need an online location to save and store the documents. For this, you would use SharePoint online.

NEW QUESTION 191

- (Exam Topic 5)

Your company has a Microsoft Office 365 subscription that contains the groups shown in the following table.

Name	Members
Group1	User1, User2
Group2	User3

You have the licenses shown in the following table.

License	Included service	Assigned to
Microsoft 365	Microsoft Exchange Online	Group1
Microsoft 365	Microsoft SharePoint Online	User1, User2, User3

Another administrator removes User1 from Group1 and adds Group2 to Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 is licensed for SharePoint Online.	<input type="radio"/>	<input type="radio"/>
User2 is licensed for SharePoint Online.	<input type="radio"/>	<input type="radio"/>
User3 is licensed for SharePoint Online.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

User1, User2 and User3 have each been assigned a SharePoint license directly. Therefore, they are all licensed for SharePoint Online.

Changing the group memberships will only affect whether or not they are licensed for Exchange Online because the Exchange Online licenses are assigned to Group1.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/active-directory-licensing-what-is-azure-po>

NEW QUESTION 195

- (Exam Topic 5)

Your company uses email, calendar, contact, and task services in Microsoft Outlook.com.

You purchase a Microsoft 365 subscription and plan to migrate all users from Outlook.com to Microsoft 365. You need to identify which user data can be migrated to Microsoft 365.

Which type of data should you identify?

- A. task
- B. email
- C. calendar
- D. contacts

Answer: B

Explanation:

You can use the Internet Message Access Protocol (IMAP) to migrate user email from Gmail, Exchange, Outlook.com, and other email systems that support IMAP migration. When you migrate the user's email by

using IMAP migration, only the items in the users' inbox or other mail folders are migrated. Contacts, calendar items, and tasks can't be migrated with IMAP, but they can be by a user.

Reference:

<https://docs.microsoft.com/en-us/exchange/mailbox-migration/mailbox-migration#migrate-email-from-anotheri>

NEW QUESTION 200

- (Exam Topic 4)

You need to recommend the development environment and tools for the development of SalesApp. What should you recommend? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Development model:

	▼
Office Add-ins	
SharePoint Framework (SPFx) web parts	
Microsoft Visual Studio Tools for Office (VSTO)	

IDE:

	▼
Script Lab	
Microsoft Visual Studio	
Microsoft Visual Studio Code	

Front-end framework:

	▼
Fluent UI	
Bootstrap	
Material Design	

- A. Mastered
B. Not Mastered

Answer: A

Explanation:

Graphical user interface, text, application Description automatically generated

Box 1: Office Add-ins

Scenario: SalesApp must be integrated with Microsoft Word and must combine images and text from multiple sources to create a quotation as a DOCX file. You can use the Office Add-ins platform to build solutions that extend Office applications and interact with content in Office documents.

Box 2: Microsoft Visual Studio

Visual Studio can be used to create Office Add-ins for Excel, Outlook, Word, and PowerPoint. An Office Add-in project gets created as part of a Visual Studio solution and uses HTML, CSS, and JavaScript.

Box 3: Fluent UI

Fluent UI is the upcoming and continually evolving design system for Microsoft 365. Currently, there is an ongoing merge in the process to have one consistent UI Framework across the Microsoft ecosystem.

Reference:

<https://docs.microsoft.com/en-us/office/dev/add-ins/overview/office-add-ins>

<https://n8d.at/5-reasons-or-thoughts-on-fluent-ui-web>

NEW QUESTION 205

- (Exam Topic 4)

You need to recommend which type of Office Add-in must be used for SalesApp. What should you recommend?

- A. module extension
B. task pane
C. custom function
D. contextual

Answer: B

Explanation:

Reference:

<https://docs.microsoft.com/en-us/office/dev/add-ins/word/word-add-ins-programming-overview>

NEW QUESTION 208

- (Exam Topic 4)

You need to provide users with access to SalesApp. The solution must meet the technical requirements What should you include in the solution?

- A. Microsoft AppSource
B. sideloading
C. Centralized Deployment
D. App Catalog in SharePoint Online

Answer: A

NEW QUESTION 213

- (Exam Topic 4)

You need to recommend the development environment and tools for the redesign of the research department's SharePoint Online sites.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Development model:

	▼
Full-trust web parts	
Sandboxed solutions	
SharePoint Framework (SPFx)	

IDE:

	▼
Eclipse	
Microsoft Visual Studio	
Microsoft Visual Studio Code	

Front-end framework:

	▼
Bootstrap	
Fluent UI	
Material Design	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Graphical user interface, text, application Description automatically generated

NEW QUESTION 217

- (Exam Topic 4)

You need to modify the HRApp manifest to provide a tab that supports querying the third-party HR system. Which section of the manifest should you modify, and which value should you set as the scope? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Section:

	▼
bots	
staticTabs	
configurableTabs	
composeExtensions	

Scope:

	▼
team	
meeting	
personal	

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Graphical user interface, text, application Description automatically generated

Reference:

<https://docs.microsoft.com/en-us/microsoftteams/platform/resources/schema/manifest-schema#composeextensions>

NEW QUESTION 218

- (Exam Topic 4)

You need to recommend a model for the expense claims solution. What should you recommend?

- A. actionable messages via connectors that use an actionable message card
- B. actionable messages via email that uses an adaptive card
- C. actionable messages via connectors that use an adaptive card
- D. actionable messages via email that uses an actionable message card

Answer: D

Explanation:

Sending actionable messages via email is supported. You use actionable message cards. Scenario:

Create an email workflow solution for expense claims. Users will submit their expense claims and the system will email an approval request to their manager.

The expense claims solution must provide managers with claim information and the ability to manage the claim by using Microsoft Outlook, Outlook on the web, or Outlook for iOS and Android.

Reference:

<https://docs.microsoft.com/en-us/outlook/actionable-messages/send-via-email>

NEW QUESTION 221

- (Exam Topic 3)

You need to ensure that Litware has the appropriate licence to support the planned changes. The solution must minimize costs. Which license type should you use?

- A. Microsoft 365 Enterprise E5
- B. Office 365 Enterprise E5
- C. Office 365 Enterprise F3
- D. Microsoft 365 Enterprise E3

Answer: B

NEW QUESTION 225

- (Exam Topic 4)

You need to configure HRApp to enable users to search for specific jobs by using chat in Microsoft Teams. Which three actions should you perform in sequence?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Implement a handler for the `jobsearch` command in the Microsoft Bot Framework app.

In the HRApp manifest, configure the `botId` value in the `bot` section to match the `botId` value of the bot registration.

Implement a handler for the `query` command in the Microsoft Bot Framework app.

Create a bot registration and a Microsoft Bot Framework app.

In the HRApp manifest, configure the `botId` value in the `ComposeExtensions` section to match the `botId` value of the bot registration.

Answer Area

>

<

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Graphical user interface, text, application Description automatically generated

Step 1: Create a bot registration..

Step 2: In the HRApp manifest, configure the `botId` value in the `ComposeExtensions` section to match the `botId` value of the bot registration.

Scenario: HRApp must include a messaging extension that enables users to search jobs by job title or job ID. Step 3: Implement a handler

Reference:

<https://docs.microsoft.com/en-us/azure/bot-service/bot-service-quickstart-registration>

NEW QUESTION 230

- (Exam Topic 3)

You need to ensure that the Microsoft 365 incidents and advisories are reviewed monthly.

Which users can review the incidents and advisories, and which blade should the users use? To answer, select the appropriate options in the answer area

NOTE: Each correct selection is worth one part

Users:

Admin1 only

Admin1 and Admin3 only

Admin1, Admin2, and Admin3 only

Admin1, Admin2, Admin3, and Admin4

Blade:

Reports

Service Health

Message center

- A. Mastered
B. Not Mastered

Answer: A

Explanation:
Graphical user interface, application Description automatically generated

NEW QUESTION 232

- (Exam Topic 3)
You need to configure the Office 365 service status notifications and limit access to the service and feature updates. The solution must meet the technical requirements.
What should you configure in the Microsoft 365 admin center? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

To configure the notifications:

Briefing email

Help desk information

Organization information

To limit access:

Privileged Access

Release preferences

Office installation options

- A. Mastered
B. Not Mastered

Answer: A

Explanation:
Graphical user interface, text, table Description automatically generated
Reference:
<https://docs.microsoft.com/en-us/briefing/be-admin>
<https://docs.microsoft.com/en-us/microsoft-365/admin/manage/release-options-in-office-365?view=o365-world>

NEW QUESTION 235

- (Exam Topic 3)
You need to configure Microsoft Teams to support the technical requirements tor collaborating with A. Datum What should you configure in the Microsoft Teams admin center?

- A. meeting policies
B. external access
C. guest access
D. messaging policies

Answer: C

NEW QUESTION 239

- (Exam Topic 2)
You need to meet the application requirements for the Office 365 ProPlus applications. You create an XML files that contains the following settings.

```
<Add SourcePath="\\Server1\OfficeSoftware"
      OfficeClientEdition="32"
      Channel="Targeted"
      AllowCdnFallback="True">
  <Product ID="O365ProPlusRetail">
    <Language ID="MatchOS" Fallback="en-us" />
  </Product>
</Add> |
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.

Office 365 ProPlus feature updates will be installed [answer choice].

▼
automatically once a year
automatically twice a year
manually

To meet the technical requirement for Office 365 ProPlus, [answer choice].

▼
Change SourcePath to DownloadPath.
Set the value for AllowCdnFallback to False.
Add SCKCacheOverride=1 to the Product section.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Box 1:

Office 365 ProPlus feature updates will be installed twice a year in March and September.

The Channel element in the configuration file is set to 'Targeted'. This means Semi-Annual Targeted. To help your organization prepare for a Semi-Annual Channel release, Microsoft provides Semi-Annual

Channel (Targeted). The primary purpose of this update channel is to give pilot users and application compatibility testers in your organization a chance to work

with the upcoming Semi-Annual Channel release

Box 2:

Microsoft Office 365 ProPlus applications must be installed from a network share only.

The AllowCDNFallback value is currently set to true. The purpose of this setting is to enable Office 365 to be downloaded from Microsoft's Content Delivery Network if the network share is unavailable. The AllowCDNFallback value should be set to false to meet the technical requirement.

Reference:

<https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool#updat>

<https://docs.microsoft.com/en-us/deployoffice/overview-of-update-channels-for-office-365-proplus>

NEW QUESTION 241

- (Exam Topic 2)

You need to recommend which DNS record must be created before adding a domain name for the project. You need to recommend which DNS record must be created before you begin the project.

Which DNS record should you recommend?

- A. alias (CNAME)
- B. host information (HINFO)
- C. host (A)
- D. mail exchanger (MX)

Answer: D

Explanation:

When you add a custom domain to Office 365, you need to verify that you own the domain. You can do this by adding either an MX record or a TXT record to the DNS for that domain.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/get-help-with-domains/create-dns-records-at-any-dns-hosting>

NEW QUESTION 242

- (Exam Topic 2)

Which role should you assign to User1?

- A. Security Administrator
- B. Records Management
- C. Security Reader
- D. Hygiene Management

Answer: C

Explanation:

➤ A user named User1 must be able to view all DLP reports from the Microsoft 365 admin center.

Users with the Security Reader role have global read-only access on security-related features, including all information in Microsoft 365 security center, Azure Active Directory, Identity Protection, Privileged Identity Management, as well as the ability to read Azure Active Directory sign-in reports and audit logs, and in Office 365 Security & Compliance Center.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/directory-assign-admin-roles>

NEW QUESTION 243

- (Exam Topic 1)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.

Solution: From the Office 365 admin center, you assign User2 the Security Reader role. From the Exchange admin center, you assign User2 the Compliance Management role.
Does this meet the goal?

- A. Yes
- B. NO

Answer: A

Explanation:

➤ User2 must be able to view reports and schedule the email delivery of security and compliance reports. The Security Reader role can view reports. The Compliance Management role can schedule the email delivery of security and compliance reports. Reference:
<https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo>

NEW QUESTION 247

- (Exam Topic 1)

You need to meet the security requirement for Group1. What should you do?

- A. Configure all users to sign in by using multi-factor authentication.
- B. Modify the properties of Group1.
- C. Assign Group1 a management role.
- D. Modify the Password reset properties of the Azure AD tenant.

Answer: D

Explanation:

References:

➤ The members of Group1 must be required to answer a security question before changing their password.
If SSPR (Self Service Password Reset) is enabled, you must select at least one of the following options for the authentication methods. Sometimes you hear these options referred to as "gates."
Mobile app notification Mobile app code
Email
Mobile phone Office phone Security questions
You can specify the required authentication methods in the Password reset properties of the Azure AD tenant. In this case, you should set the required authentication method to be 'Security questions'.
Reference:
<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-sspr-howitworks>
