

## OGEA-101 Dumps

### TOGAF Enterprise Architecture Part 1 Exam (English)

<https://www.certleader.com/OGEA-101-dumps.html>

**NEW QUESTION 1**

What is an objective of the ADM Preliminary Phase?

- A. To develop a vision of the business value to be delivered by the proposed enterprise architecture
- B. To select and implement tools to support the Architecture Capability
- C. To obtain approval for the Statement of Architecture Work
- D. To create the initial version of the Architecture Roadmap

**Answer:** B

**Explanation:**

The Preliminary Phase is the preparatory phase of the Architecture Development Method (ADM) cycle, which sets the context and direction for the architecture work. One of the objectives of this phase is to select and implement tools to support the Architecture Capability, which is the ability of an organization to perform enterprise architecture effectively and efficiently. Tools can include software applications, methods, techniques, standards, and frameworks that assist the architecture development and governance processes. The selection and implementation of tools should be based on the requirements and constraints of the organization, and the alignment with the Architecture Principles and the Architecture Vision3 References: 3: The TOGAF Standard, Version 9.2, Part II: Architecture Development Method (ADM), Chapter 6: Preliminary Phase : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 45: Establishing and Maintaining an Enterprise Architecture Capability : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 46: Tools for Architecture Development

**NEW QUESTION 2**

Which phase of the ADM has the purpose to develop an Enterprise Architecture Capability?

- A. Phase G
- B. Preliminary Phase
- C. Phase A
- D. Phase B

**Answer:** B

**Explanation:**

According to the TOGAF Standard, 10th Edition, the Preliminary Phase of the Architecture Development Method (ADM) has the purpose to develop an Enterprise Architecture Capability 1. An Enterprise Architecture Capability is the ability of the organization to perform the activities and tasks related to Enterprise Architecture, such as defining the scope, principles, vision, governance, and stakeholders of the architecture. The Preliminary Phase also establishes the architecture framework, the architecture repository, the architecture tools, and the architecture team 1. The other options are not correct, as they have different purposes in the ADM. Phase G: Implementation Governance has the purpose to ensure that the implementation projects conform to the target architecture 2. Phase A: Architecture Vision has the purpose to define the scope, stakeholders, business drivers, and objectives of the architecture project 3. Phase B: Business Architecture has the purpose to describe the baseline and target business architecture, and to identify the gaps between them . References: 1: TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 6: Preliminary Phase. 2: TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 18: Phase G: Implementation Governance. 3: TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 12: Phase A: Architecture Vision. : TOGAF Standard, 10th Edition, Part II: Architecture Development Method, Chapter 13: Phase B: Business Architecture.

**NEW QUESTION 3**

What is defined as the effect of uncertainty on objectives?

- A. Vulnerability
- B. Risk
- C. Continuity
- D. Threat

**Answer:** B

**Explanation:**

Risk is defined as the effect of uncertainty on objectives, according to the ISO 31000 standard, which provides principles and guidelines for risk management1 Risk can be positive or negative, depending on whether the uncertainty affects the achievement or the failure of the objectives. Risk can also be expressed in terms of likelihood and impact, which indicate the probability and the consequence of the risk occurrence. Risk management is the coordinated activities to direct and control an organization with regard to risk. Risk management is an integral part of the TOGAF standard, as it helps to identify, assess, and treat the risks that may affect the architecture development and implementation2 References: 1: ISO 31000:2018, Risk management — Guidelines, Clause 3.1 2: The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 32: Risk Management

**NEW QUESTION 4**

What provides context for architecture work, by describing the needs and ways of working employed by the enterprise?

- A. Architecture Contracts
- B. Business principles business goals, and business drivers
- C. Strategy and vision
- D. Stakeholder needs

**Answer:** B

**Explanation:**

Business principles business goals, and business drivers provide context for architecture work, by describing the needs and ways of working employed by the enterprise. They define what the enterprise wants to achieve, how it wants to operate, and what factors influence its decisions and actions. Reference: The TOGAF® Standard | The Open Group Website, Section 3.2 Preliminary Phase.

**NEW QUESTION 5**

Which section of the TOGAF template for Architecture Principles should describe the relationship to other principles?

- A. Name
- B. Rationale
- C. Statement
- D. Implications

**Answer:** B

**Explanation:**

According to the TOGAF template for Architecture Principles, the Rationale section should describe the relationship to other principles, as well as the business benefits and the intentions of adhering to the principle. The Rationale section should use business terminology and point to the similarity of information and technology principles to the principles governing business operations. The Rationale section should also explain how the principle supports the achievement of the business objectives and key architecture drivers. References:

- ? Architecture Principles Template
- ? The TOGAF Standard, Version 9.2 - Architecture Principles
- ? The Open Group Exam OGEA-103 Topic 1 Question 4 Discussion

**NEW QUESTION 6**

Consider the following statements

- \* 1 A whole corporation or a division of a corporation
- \* 2 A government agency or a single government department
- \* 3 Partnerships and alliances of businesses working together such as a consortium or supply chain

What are those examples of according to the TOGAF Standard?

- A. Enterprises
- B. Business Units
- C. Organizations
- D. Architectures Scopes

**Answer:** A

**Explanation:**

Enterprises are examples of the scope of an architecture according to the TOGAF Standard. An enterprise is defined as any collection of organizations that has a common set of goals and/or a single bottom line. Enterprises can be whole corporations or divisions of a corporation, government agencies or single government departments, partnerships and alliances of businesses working together, etc. Reference: The TOGAF® Standard | The Open Group Website, Section 2.1 Core Concepts.

**NEW QUESTION 7**

Complete the sentence A set of architecture principles that cover every situation perceived meets the recommended criteria of \_\_\_\_\_

- A. consistency
- B. robustness
- C. stability
- D. completeness

**Answer:** D

**Explanation:**

A set of architecture principles that cover every situation perceived meets the recommended criteria of completeness. Completeness is one of the six criteria that should be applied when developing or assessing architecture principles. Completeness means that there are no gaps or overlaps in the coverage of principles across all relevant aspects of the enterprise's architecture. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.7 Architecture Principles.

**NEW QUESTION 8**

Which of the following best summarizes the purpose of Enterprise Architecture?

- A. Taking major improvement decisions.
- B. Guiding effective change.
- C. Controlling the bigger changes.
- D. Governing the Stakeholders.

**Answer:** B

**Explanation:**

EA applies architecture principles and practices to analyze, design, plan, and implement enterprise analysis that supports digital transformation, IT growth, and the modernization of IT<sup>2</sup>. EA also helps organizations improve the efficiency, timeliness, and reliability of business information, as well as the alignment, agility, and adaptability of the architecture to the changing needs and requirements<sup>3</sup>. Therefore, the best summary of the purpose of EA is to guide effective change. References: 1: Enterprise architecture - Wikipedia 2: What is enterprise architecture? A framework for transformation 3: 3 The Purpose of Enterprise Architecture - The Open Group

**NEW QUESTION 9**

Which section of the TOGAF template for Architecture Principles should highlight the requirements for carrying out the principle?

- A. Rationale
- B. Name
- C. Statement
- D. Implications

**Answer:** D

**Explanation:**

The Implications section describes the impact of adhering to the principle on the organization, the processes, the information systems, and the technology<sup>23</sup>. It also identifies the changes, costs, and risks that may result from applying the principle<sup>23</sup>. The Implications section helps to communicate the benefits and consequences of the principle to the stakeholders and to guide the implementation and governance of the architecture<sup>23</sup>. The other sections of the TOGAF template for Architecture Principles are<sup>1</sup>:

- Name: This section provides a short and memorable name for the principle that represents its essence and purpose<sup>23</sup>. The name should not mention any specific technology or solution<sup>23</sup>.
- Statement: This section provides a concise and formal definition of the principle that expresses the fundamental rule or constraint that the principle imposes<sup>23</sup>. The statement should be clear, unambiguous, and testable<sup>23</sup>.
- Rationale: This section provides the reasoning and justification for the principle, explaining why it is important and how it supports the business goals and drivers<sup>23</sup>. The rationale should also link the principle to the higher-level enterprise or IT principles that it elaborates on<sup>23</sup>.

References: 2: The TOGAF Standard, Version 9.2 - Architecture Principles 3: TOGAF 8.1.1 Online - Architecture Principles 1: Architecture Principles Template

**NEW QUESTION 10**

Which of the following is the ability to develop use and sustain the architecture of a particular enterprise using architecture to govern change?

- A. An EA Capability
- B. An EA repository
- C. An EA framework
- D. An Enterprise Architecture

**Answer: A**

**Explanation:**

The ability to develop, use, and sustain the architecture of a particular enterprise using architecture to govern change is an EA Capability. An EA Capability is a set of skills, processes, roles, responsibilities, tools, and techniques that enable an enterprise to successfully develop and maintain its Enterprise Architecture and achieve its desired outcomes. An EA Capability is part of an enterprise's overall capability portfolio and should be aligned with its strategy and objectives.

Reference: The TOGAF® Standard | The Open Group Website, Section 3.2 Preliminary Phase.

**NEW QUESTION 10**

Consider the following chart:

Which important concept for Enterprise Architecture Practitioners does it illustrate?

- A. Enterprise Architects must use Gantt charts to communicate with Stakeholders.
- B. An Enterprise Architecture must be developed in phases with a limited fixed duration.
- C. ADM phases must be run in a sequenced approach to produce the Architecture.
- D. ADM phases must be run simultaneously until the relevant information has been produced.

**Answer: C**

**Explanation:**

The chart shown is a Gantt chart, which is commonly used for project management to illustrate a project schedule. In the context of TOGAF (The Open Group Architecture Framework), which is a framework for enterprise architecture, this Gantt chart is demonstrating the sequenced approach to the Architecture Development Method (ADM). The ADM is the core process of TOGAF which provides a tested and repeatable process for developing architectures. The ADM is described as being iterative, over the whole process, between phases, and within phases. For each iteration of the ADM, a fresh decision must be taken about each of the parameters (scope, granularity, time period, and architecture assets).

The ADM consists of a number of phases that have to be followed in sequence:

- ? Preliminary Phase: Framework and principles
- ? Phase A: Architecture Vision
- ? Phase B: Business Architecture
- ? Phase C: Information Systems Architectures, including Data and Application Architectures
- ? Phase D: Technology Architecture
- ? Phase E: Opportunities and Solutions
- ? Phase F: Migration Planning
- ? Phase G: Implementation Governance
- ? Phase H: Architecture Change Management

? Requirements Management

Each phase is dependent on the outputs of the previous phase and the Requirements Management phase runs throughout. The Gantt chart clearly shows the dependency and sequence in which these phases occur, implying that a structured approach is followed to produce the enterprise architecture.

References:

? The TOGAF Standard, Version 9.2, a standard of The Open Group

? The TOGAF documentation available at <https://publications.opengroup.org/standards/architecture> and <https://publications.opengroup.org/guides/architecture>

### NEW QUESTION 13

Consider the following ADM phases objectives.

	Objective
1	Finalize the Architecture Roadmap and the supporting Implementation and Migration Plan
2	Ensure that the business value and cost of work packages and Transition Architectures is understood by key stakeholders
3	Define the overall Solution Building Blocks (SBBs) to finalize the Target Architecture based on the ABBs
4	Ensure conformance with the Target Architecture by implementation projects

Which phase does each objective match?

- A. 1F-2G-3F-4F
- B. 1E-2F-3E-4G
- C. 1G-2E-3F-4E
- D. 1F-2F-3E-4G

**Answer:** B

#### Explanation:

1E: To identify delivery vehicles (projects programs portfolios) that will deliver the Target Architecture 2F: To confirm readiness and ability to undergo change 3E: To determine whether an incremental approach is required and if so identify Transition Architectures that will deliver continuous business value 4G: To perform appropriate governance functions while the solution is being implemented

Reference: The TOGAF® Standard | The Open Group Website, Section 3.2 ADM Phases.

### NEW QUESTION 17

What are the following activities part of?

- Initial risk assessment
- Risk mitigation and residual risk assessment
- Risk monitoring

- A. Risk Management
- B. Phase A
- C. Security Architecture
- D. Phase C

**Answer:** A

#### Explanation:

The following activities are part of Risk Management:

? Initial risk assessment

? Risk mitigation and residual risk assessment

? Risk monitoring

Risk Management is the process of identifying, assessing, and responding to risks that may affect the achievement of the enterprise's objectives. Risk Management involves balancing positive and negative outcomes resulting from the realization of either opportunities or threats. Reference: The TOGAF® Standard | The Open Group Website, Section 3.3.3 Risk Management.

### NEW QUESTION 22

What are the four architecture domains that the TOGAF standard deals with?

- A. Business, Data, Application, Technology
- B. Capability, Segment, Enterprise, Federated
- C. Baseline, Candidate, Transition, Target
- D. Application, Data, Information, Knowledge

**Answer:** A

#### Explanation:

The TOGAF standard divides Enterprise Architecture into four primary architecture domains: business, data, application, and technology. These domains

represent different aspects of an enterprise and how they relate to each other. The business domain defines the business strategy, governance, organization, and key business processes. The data domain describes the structure of the logical and physical data assets and data management resources. The application domain provides a blueprint for the individual applications to be deployed, their interactions, and their relationships to the core business processes. The technology domain describes the logical software and hardware capabilities that are required to support the deployment of business, data, and application services. Other domains, such as motivation, security, or governance, may span across these four primary domains. References:

? The TOGAF Standard, Version 9.2 - Core Concepts

? Domains - The Open Group

? TOGAF® Standard — Introduction - Definitions - The Open Group

? The TOGAF Standard, Version 9.2 - Definitions - The Open Group

? TOGAF and the history of enterprise architecture | Enable Architect

#### NEW QUESTION 25

According to the TOGAF standard, what term describes an individual with an interest in a system?

- A. stakeholder
- B. consumer
- C. lead architect
- D. sponsor

**Answer:** A

#### Explanation:

According to the TOGAF Standard, 10th Edition, a stakeholder is ??an individual with an interest in a system?? 1. A stakeholder can be anyone who is affected by the system, or who can influence or be influenced by the system. Stakeholders can have different roles, perspectives, and concerns regarding the system, and they can be internal or external to the organization. Stakeholder management is a technique that helps to identify, analyze, and engage the stakeholders of an architecture project, and to address their needs and expectations 2. The other options are not correct, as they are not the term used by the TOGAF Standard to describe an individual with an interest in a system. A consumer is ??an individual or group that uses a product or service?? 1. A lead architect is ??an individual who is responsible for leading the development of an architecture?? 1. A sponsor is ??an individual who provides funding and support for an architecture project?? 1. References: 1: TOGAF Standard, 10th Edition, Part I: Introduction, Chapter 3: Definitions. 2: TOGAF Standard, 10th Edition, Part III: ADM Guidelines and Techniques, Chapter 24: Stakeholder Management.

#### NEW QUESTION 29

What should be put in place through organization structures, roles, responsibilities, skills and processes to carry out architectural activity effectively?

- A. An EA Capability
- B. An Enterprise Architecture
- C. An EA framework
- D. An EA repository

**Answer:** A

#### Explanation:

An EA Capability is the ability of an organization to perform enterprise architecture effectively and efficiently. It involves establishing and maintaining the appropriate organization structures, roles, responsibilities, skills, processes, tools, and governance mechanisms to support the development and use of enterprise architecture. An EA Capability enables the organization to align its business and IT strategies, deliver value from its investments, manage change and complexity, and improve its performance and agility12 References: 1: The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 44: Introduction 2: The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 45: Establishing and Maintaining an Enterprise Architecture Capability

#### NEW QUESTION 30

Consider the following statement:

Separate projects may operate their own ADM cycles concurrently, with relationships between the different projects

What does it illustrate?

- A. Implementation governance
- B. Enterprise Architecture
- C. Iteration
- D. Requirements management

**Answer:** C

#### Explanation:

The statement illustrates iteration and the ADM. Iteration is the technique of repeating a process or a phase with the aim of improving or refining the outcome. Iteration allows for feedback loops and adaptations at any point in the architecture development and transition process. Separate projects may operate their own ADM cycles concurrently, with relationships between the different projects, to address different aspects or levels of the architecture in an iterative manner. Reference: The TOGAF® Standard | The Open Group Website, Section 3.1 Introduction to the ADM.

#### NEW QUESTION 33

Which statement best describes iteration and the ADM?

- A. The ADM is iterative within the first cycle and then between phases
- B. The level of detail is defined once and applies to all iterations
- C. The ADM is sequential Iteration is applied within phases
- D. The ADM is iterative, over the whole process between phases and within phases

**Answer:** D

#### Explanation:

This statement best describes iteration and the ADM. The ADM is iterative over the whole process between phases and within phases because it allows for

feedback loops and refinements at any point in the architecture development and transition process. Iteration enables architects to address changing requirements, assumptions, constraints, and environments; to validate and improve architectures; to manage risks and issues; and to ensure stakeholder satisfaction and value realization. Reference: The TOGAF® Standard | The Open Group Website, Section 3.1 Introduction to the ADM.

**NEW QUESTION 38**

What does the TOGAF ADM recommend for use in developing an Architecture Vision document?

- A. Requirements Management
- B. Architecture Principles
- C. Gap Analysis
- D. Business Scenarios

**Answer: D**

**Explanation:**

Business scenarios are a technique recommended by the TOGAF ADM for use in developing an Architecture Vision document<sup>12</sup>. Business scenarios are a means of capturing the business requirements and drivers, the processes and actors involved, and the desired outcomes and measures of success<sup>34</sup>. Business scenarios help to create a common vision and understanding among the stakeholders, and to identify and validate the architecture requirements. Business scenarios also provide a basis for analyzing the impact and value of the proposed architecture. References:

- The TOGAF Standard, Version 9.2 - Phase A: Architecture Vision - The Open Group
- TOGAF® Standard — Introduction - Phase A: Architecture Vision
- The TOGAF Standard, Version 9.2 - Definitions - The Open Group
- Business Scenarios - The Open Group
- [The TOGAF Standard, Version 9.2 - Architecture Requirements Specification - The Open Group]
- [The TOGAF Standard, Version 9.2 - Architecture Vision - The Open Group]
- [The TOGAF Standard, Version 9.2 - Business Transformation Readiness Assessment - The Open Group]

**NEW QUESTION 42**

Consider the following statements:

- \* 1. Each contracted party is required to act responsibly to the organization and its stakeholders.
- \* 2. All decisions taken, processes used, and their implementation will not be allowed to create unfair advantage to any one particular party.
- \* 3. Digital Transformation and operations will be more effective and efficient.
- \* 4. Strategic decision-making by C-Level executives and business leaders will be more effective.

Which statements highlight the value and necessity for Architecture Governance to be adopted within organizations?

- A. 1 & 2
- B. 2 & 3
- C. 3 & 4
- D. 1 & 4

**Answer: A**

**Explanation:**

Architecture governance is the practice of ensuring compliance with the enterprise architecture and its principles, standards, and goals. Architecture governance provides the means to establish, monitor, and control the architecture development and implementation processes, and to resolve any issues or conflicts that may arise. Architecture governance also ensures that all stakeholders are represented and involved in the decision-making process, and that their interests and concerns are balanced and aligned. Statements 1 and 2 highlight the value and necessity for architecture governance to be adopted within organizations, as they emphasize the importance of responsibility, accountability, fairness, and transparency in the architectural activities. Statements 3 and 4 are more related to the benefits and outcomes of having a good enterprise architecture, rather than the governance aspect. References: : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 50: Architecture Governance : The TOGAF Standard, Version 9.2, Part III: ADM Guidelines and Techniques, Chapter 29: Architecture Governance

**NEW QUESTION 46**

Consider the following statements.

- \* 1. All processes, decision-making, and mechanisms used will be established so as to minimize or avoid potential conflicts of interest.
- \* 2. More effective strategic decision-making will be made by C-Level executives and business leaders.
- \* 3. All actions implemented and their decision support will be available for inspection by authorized organization and provider parties.
- \* 4. Digital Transformation and operations will be more effective and efficient.

Which statements highlight the value and necessity for Architecture Governance to be adopted within organizations?

- A. 1 & 4
- B. 1 & 3
- C. 2 & 4
- D. 2 & 3

**Answer: B**

**Explanation:**

Statements 1 and 3 highlight the value and necessity for Architecture Governance to be adopted within organizations. Architecture Governance is the practice and orientation by which Enterprise Architectures and other architectures are managed and controlled at an enterprise-wide level<sup>12</sup>. It ensures that architectural decisions are aligned with the organization's strategy, objectives, and standards. Architecture Governance also involves establishing and maintaining processes, decision-making, and mechanisms to avoid or minimize potential conflicts of interest, such as between different stakeholders, business units, or projects<sup>34</sup>.

Moreover, Architecture Governance requires transparency

and accountability for all actions implemented and their decision support, so that they can be inspected and evaluated by authorized parties, such as auditors, regulators, or customers<sup>5</sup>. References:

- The TOGAF Standard, Version 9.2 - Architecture Governance - The Open Group
- Architecture Governance - The Open Group
- Tutorial: Governance in TOGAF's Architecture Development Method (ADM)
- Architecture Governance in TOGAF: Ensuring Effective Management and Compliance
- The TOGAF Standard, Version 9.2 - Definitions - The Open Group

•[Architecture Governance in TOGAF: Ensuring Alignment and Control]

#### NEW QUESTION 48

Consider the following ADM phases objectives.

	Objective
1	Ensure that the business value and cost of work packages and Transition Architectures is understood by key stakeholders
2	Ensure conformance with the Target Architecture by implementation projects
3	Ensure that the architecture development cycle is maintained
4	Ensure that the Architecture Governance Framework is executed

Which phase does each objective match?

- A. 1F-2G-3G-4H
- B. 1H-2F-3F-4G
- C. 1F-2G-3H-4H
- D. 1G-2H-3H-4F

**Answer:** B

#### Explanation:

? According to the TOGAF Standard, Version 9.2, the ADM phases and their objectives are as follows1:

? Based on the above definitions, we can match each objective with the corresponding phase as follows:

References:

? 1: The TOGAF Standard, Version 9.2, Chapter 5: Architecture Development Method (ADM)

? 2: The TOGAF Standard, Version 9.2, Chapter 21: Architecture Change Management

? 3: The TOGAF Standard, Version 9.2, Chapter 20: Migration Planning

? 4: The TOGAF Standard, Version 9.2, Chapter 19: Implementation Governance

#### NEW QUESTION 50

In which phase of the ADM cycle do building blocks become implementation-specific?

- A. Phase B
- B. Phase C
- C. Phase D
- D. Phase E

**Answer:** D

#### Explanation:

Building blocks are reusable components of business, IT, or architectural capability that can be combined to deliver architectures and solutions. Building blocks can be defined at various levels of detail, depending on the stage of architecture development. In the earlier phases of the ADM cycle (A to D), building blocks are defined in generic terms, such as logical or physical, to provide a high-level view of the architecture. In Phase E: Opportunities and Solutions, building blocks become implementation-specific, meaning that they are linked to specific products, standards, technologies, and vendors that are available in the market. This phase also identifies the delivery vehicles, such as projects, programs, or portfolios, that will realize the building blocks12 References: 1: The TOGAF Standard, Version 9.2, Part II: Architecture Development Method (ADM), Chapter 23:

Phase E: Opportunities and Solutions 2: The TOGAF Standard, Version 9.2, Part IV: Architecture Content Framework, Chapter 36: Building Blocks

#### NEW QUESTION 52

Complete the sentence The TOGAF standard covers the development of four architecture domains. Business. Data, Technology and .

- A. Segment
- B. Transition
- C. Capability
- D. Application

**Answer:** D

#### Explanation:

The TOGAF standard covers the development of four architecture domains: Business, Data, Technology and Application. These domains represent different aspects of an enterprise's architecture and provide a consistent way of describing, analyzing, and designing them. Reference: The TOGAF® Standard | The Open Group Website, Section 2.2 Architecture Development Method (ADM).

#### NEW QUESTION 54

Complete the following sentence. In the ADM documents which are under development and have not undergone any formal review and approval process are .

- A. Called ???draft???
- B. Invalid
- C. In between phases
- D. Known as ???Version 0.1???

**Answer:** A

**Explanation:**

In the ADM documents which are under development and have not undergone any formal review and approval process are called ??draft?. This indicates that they are subject to change and refinement as the architecture development progresses. Reference: The TOGAF® Standard | The Open Group Website, Section 4.2.5 Architecture Deliverables.

**NEW QUESTION 59**

Which one of the following classes of information within the Architecture Repository would typically contain a list of the applications in use within the enterprise?

- A. Reference Library
- B. Architecture Metamodel
- C. Architecture Landscape
- D. Governance Log

**Answer:** C

**Explanation:**

The Architecture Landscape is a class of information within the Architecture Repository that shows an architectural view of the building blocks that are in use within the organization today (the Baseline Architecture), as well as those that are planned for the future (the Target Architecture). The Architecture Landscape typically contains a list of the applications in use within the enterprise, along with their relationships and dependencies, as well as other relevant architectural information. The Architecture Landscape helps to identify opportunities for re-use, consolidation, or retirement of existing applications, as well as gaps or overlaps in the current or future architecture. References: : The TOGAF Standard, Version 9.2, Part IV: Architecture Content Framework, Chapter 34: Architecture Landscape : The TOGAF Standard, Version 9.2, Part VI: Architecture Capability Framework, Chapter 47: Architecture Repository

**NEW QUESTION 61**

What component of the Architecture Repository represents architecture requirements agreed with the Architecture Board?

- A. Reference Library
- B. Architecture Capability
- C. Architecture Requirements Repository
- D. Governance Log

**Answer:** C

**Explanation:**

The Architecture Requirements Repository stores all the requirements that are output of the architecture development cycle, as well as the requirements that are input to the architecture development cycle<sup>1</sup>. The Architecture Requirements Repository includes the following types of requirements<sup>1</sup>:

- Stakeholder Requirements: These are the high-level requirements and expectations of the stakeholders, derived from the business drivers, goals, and objectives. They are captured and refined in the Architecture Vision phase and the Requirements Management phase.
- Architecture Requirements: These are the detailed requirements that specify what the architecture must do or deliver to meet the stakeholder requirements. They are derived and refined in the Business, Information Systems, and Technology Architecture phases.
- Implementation and Migration Requirements: These are the detailed requirements that specify what the implementation and migration projects must do or deliver to realize the architecture. They are derived and refined in the Opportunities and Solutions and Migration Planning phases.

The Architecture Requirements Repository is used to manage the architecture requirements throughout the architecture lifecycle, ensuring their traceability, consistency, and compliance<sup>1</sup>. The Architecture Board is the authority that reviews and approves the architecture requirements, as well as the architecture deliverables and artifacts, as part of the architecture governance process<sup>2</sup>.  
References: 1: Architecture Requirements Repository 2: Architecture Board

**NEW QUESTION 62**

In which part of the ADM cycle do building block gaps become associated with work packages that will address the gaps?

- A. Phases G and H
- B. Phases F
- C. Phases B C and D
- D. Phase E

**Answer:** D

**Explanation:**

In Phase E of the ADM cycle, building block gaps become associated with work packages that will address the gaps. This phase involves creating an Implementation and Migration Plan that defines a set of work packages and Transition Architectures that will deliver the Target Architecture. Reference: The TOGAF® Standard | The Open Group Website, Section 3.2.5 Phase E: Opportunities & Solutions.

**NEW QUESTION 67**

Which section of the TOGAF template for Architecture Principles should highlight the business benefits of adhering to the principle?

- A. Rationale
- B. Name
- C. Implications
- D. Statement

**Answer:** A

**Explanation:**

According to the TOGAF Standard, 10th Edition, the rationale section of the architecture principles template should highlight the business benefits of adhering to the principle, as well as the business risks of not adhering to it 1. The rationale section should explain the reasoning behind the principle, and provide evidence or arguments to support it. The rationale sections should also link the principle to the business drivers, goals, and objectives of the enterprise, and show how the principle contributes to the value and success of the enterprise. The other options are not correct, as they have different purposes in the architecture principles template. The name section should provide a short and memorable name for the principle, such as ??Information is an Asset?? or ??Business Continuity?? 1. The statement section should provide a concise and formal statement of the principle, such as ??The enterprise??s information is recognized as a core asset, and is managed accordingly?? or ??The enterprise??s ability to provide critical services and products must be maintained in the event of a disaster?? 1. The implications section should identify the impact of the principle on the enterprise, such as the changes, costs, benefits, and risks that may result from applying or violating the principle 1. References: 1: TOGAF Standard, 10th Edition, Part III: ADM Guidelines and Techniques, Chapter 23: Architecture Principles, Section 23.3 Developing Architecture Principles.

**NEW QUESTION 69**

What are the following activities part of?

- . Risk classification
- . Risk identification
- . Initial risk assessment

- A. Security Architecture
- B. Phase A
- C. Phase G
- D. Risk Management

**Answer:** D

**Explanation:**

Risk management is a generic technique that can be applied across all phases of the Architecture Development Method (ADM), as well as in the Preliminary Phase and the Requirements Management Phase2. Risk management involves the following steps1:

- Risk identification: This step involves identifying the potential risks that may affect the architecture project, such as technical, business, organizational, environmental, or legal risks. The risks can be identified through various sources, such as stakeholder interviews, workshops, surveys, checklists, historical data, or expert judgment.
  - Risk classification: This step involves categorizing the risks based on their nature, source, impact, and priority. The risks can be classified according to different criteria, such as time, cost, scope, quality, security, or compliance. The classification helps in prioritizing the risks and allocating resources and efforts to address them effectively.
  - Initial risk assessment: This step involves assessing the likelihood and impact of each risk, and determining the initial level of risk. The likelihood is the probability of the risk occurring, and the impact is the severity of the consequences if the risk occurs. The initial level of risk is the product of the likelihood and impact, and it indicates the urgency and importance of the risk. The initial risk assessment helps in identifying the most critical risks that need immediate attention and mitigation.
