Team members can upload apps from the Microsoft Teams client.	○	○
All team members can add the Microsoft Flow app to a team.	○	○
All team members can add the Microsoft Planner app to a team.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Yes
"Allow interaction with custom apps" in the org-wide policy and "upload custom apps" in the global policy are set to on. This means that users can upload custom apps to teams that allow it and to teams for which they are owners.
Box 2: Yes
The global policy allows Microsoft Flow.
Box 3: No
The global policy allows Microsoft Planner. However, the org-wide settings blocks Microsoft Planner. In this case, the org-wide policy blocking the app will override the global policy meaning the app will be blocked. When an app is blocked, users will not be able to add the app to a team.

You have a Microsoft 365 subscription. You plan to implement Microsoft Teams.
You need to perform network quality and connectivity tests from an on-premises network to Microsoft 365 Online services by using the Network Testing Companion
You install the Network Testing Companion module on a local Windows 10 device. Which additional software should you install to perform the tests?

A. the Microsoft Teams desktop client
B. Network Assessment Tool
C. Windows Assessment Toolkit
D. Windows Performance Analyzer (WPA)

Answer: B

Explanation:
According to the Microsoft documentation1, the Network Testing Companion is a PowerShell module that allows you to perform network quality and connectivity tests from an on-premises network to Microsoft 365 Online services by using the Network Testing Companion. The Network Testing Companion module requires the following software to be installed on the local Windows 10 device:
? PowerShell 5.1 or later
? .NET Framework 4.7.2 or later
? Microsoft Teams Network Assessment Tool
The Microsoft Teams Network Assessment Tool is a tool that tests the connectivity to various Teams servers deployed in the Microsoft Azure network. It measures network performance by streaming packets to the nearest edge site and back for a configurable amount of time2.
Therefore, based on this information, the correct answer is B. Network Assessment Tool. This tool is required to perform network quality and connectivity tests by using the Network Testing Companion module. The other options are either not related to network testing (the Microsoft Teams desktop client and Windows Performance Analyzer) or not required for the Network Testing Companion module (Windows Assessment Toolkit).
