NEW QUESTION 4
HOTSPOT - (Topic 6)
HOTSPOT
You have a Microsoft 365 E5 subscription.
You need to implement identity protection. The solution must meet the following requirements:
? Identify when a user's credentials are compromised and shared on the dark web.
? Provide users that have compromised credentials with the ability to self-remediate.

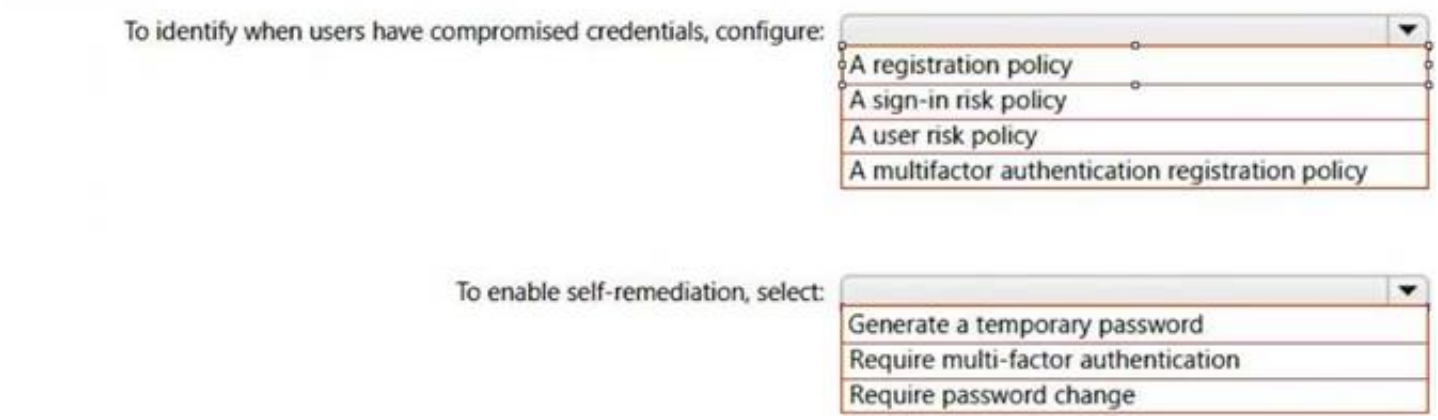
Answer Area



A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: A user risk policy
Identify when a user's credentials are compromised and shared on the dark web.
User risk-based Conditional Access policy
Identity Protection analyzes signals about user accounts and calculates a risk score based on the probability that the user has been compromised. If a user has risky sign-in behavior, or their credentials have been leaked, Identity Protection will use these signals to calculate the user risk level. Administrators can configure user risk-based Conditional Access policies to enforce access controls based on user risk, including requirements such as:
Block access
Allow access but require a secure password change.
A secure password change will remediate the user risk and close the risky user event to prevent unnecessary noise for administrators.
Box 2: Require password change
Provide users that have compromised credentials with the ability to self-remediate.
A secure password change will remediate the user risk and close the risky user event to prevent unnecessary noise for administrators

You have a Microsoft 365 subscription.
You need to configure a compliance solution that meets the following requirements: Defines sensitive data based on existing data samples
Automatically prevents data that matches the samples from being shared externally in Microsoft SharePoint or email messages
Which two components should you configure? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.

A. a trainable classifier
B. a sensitive info type
C. an insider risk policy
D. an adaptive policy scope
E. a data loss prevention (DLP) policy

Answer: AE

Explanation:
A: Classifiers
This categorization method is well suited to content that isn't easily identified by either the manual or automated pattern-matching methods. This method of categorization is more about using a classifier to identify an item based on what the item is, not by elements that are in the item (pattern matching). A classifier learns how to identify a type of content by looking at hundreds of examples of the content you're interested in identifying.
Where you can use classifiers
Classifiers are available to use as a condition for: Office auto-labeling with sensitivity labels
Auto-apply retention label policy based on a condition Communication compliance
Sensitivity labels can use classifiers as conditions, see Apply a sensitivity label to content automatically.
Data loss prevention
E: Organizations have sensitive information under their control such as financial data, proprietary data, credit card numbers, health records, or social security numbers. To help protect this sensitive data and reduce risk, they need a way to prevent their users from inappropriately sharing it with people who shouldn't have it. This practice is called data loss prevention (DLP).

You have a Microsoft 365 E5 subscription that uses Microsoft Defender for Endpoint and contains the devices shown in the following table.

Name	Operating system	Tag
Device1	Windows 10	Inventory1
Computer1	Windows 10	Inventory2
Device3	Android	Inventory3

Defender for Endpoint has the device groups shown in the following table.

Rank	Name	Matching rule
1	Group1	Tag Contains Inventory And OS in Android
2	Group2	Name Starts with Device And Tag Contains Inventory
Last	Ungrouped devices (default)	*Not applicable*

You create an incident email notification rule configured as shown in the following table.

Setting	Value
Name	Rule1
Alert severity	Low
Device group scope	Group1, Group2
Recipient email address	User1@contoso.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
If a high-severity incident is triggered for Device1, an incident email notification will be sent.	○	○
If a low-severity incident is triggered for Computer1, an incident notification email will be sent.	○	○
If a low-severity incident is triggered for Device3, an incident notification email will be sent.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: No
Device1 is in Group2 as Name starts with Device and Tag contains Inventory. However, the Group2 has alert severity low.
Box 2: No
Computer1 does not belong to either Group1 or Group2
Box 3: Yes
Device3 belongs to both Group1 and Group2.
Note: Understanding alert severity

Microsoft Defender Antivirus and Defender for Endpoint alert severities are different because they represent different scopes.
The Microsoft Defender Antivirus threat severity represents the absolute severity of the detected threat (malware), and is assigned based on the potential risk to the individual device, if infected.

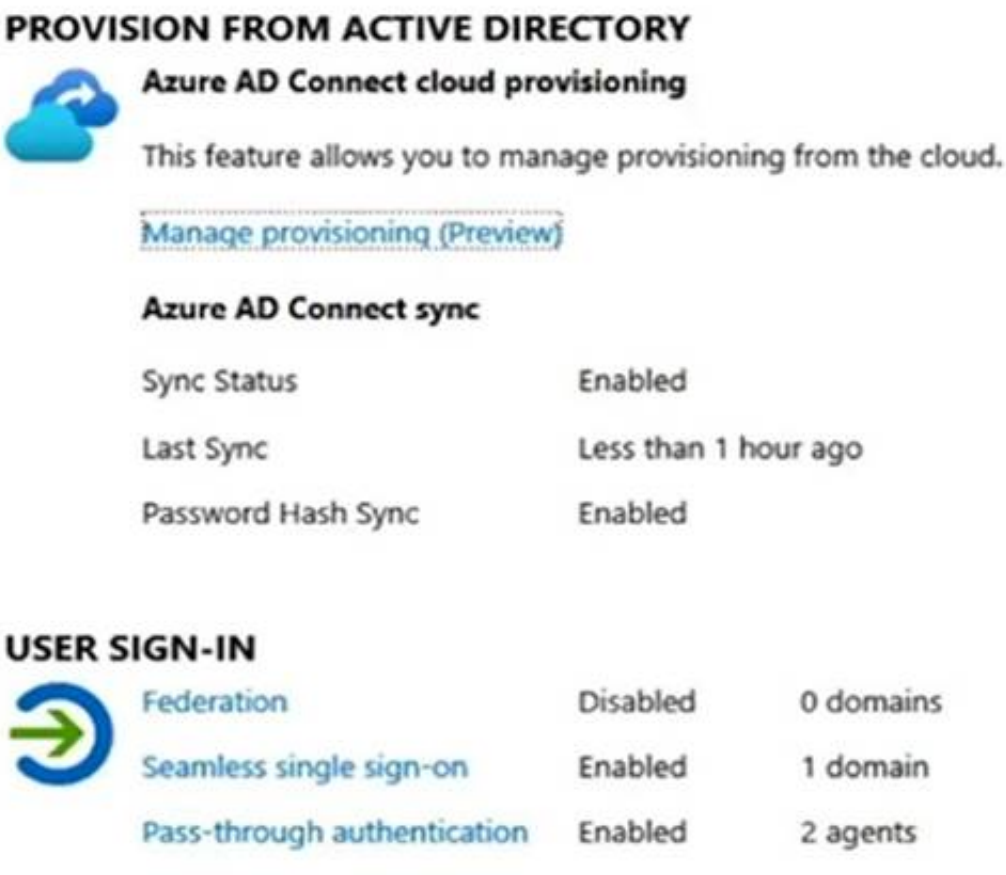
Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure AD tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)



User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com. You need to ensure that User2 can access the resources in Azure AD.
Solution: From the Microsoft Entra admin center, you add fabrikam.com as a custom domain. You instruct User2 to sign in as user2@fabrikam.com.
Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
The on-premises Active Directory domain is named contoso.com. To enable users to sign on using a different UPN (different domain), you need to add the domain to Microsoft 365 as a custom domain.

B: Overview of Microsoft Defender for Endpoint Plan 1, Reporting
The Microsoft 365 Defender portal (https://security.microsoft.com) provides easy access to information about detected threats and actions to address those threats.
The Home page includes cards to show at a glance which users or devices are at risk, how many threats were detected, and what alerts/incidents were created.
The Incidents & alerts section lists any incidents that were created as a result of triggered alerts. Alerts and incidents are generated as threats are detected across devices.
The Action center lists remediation actions that were taken. For example, if a file is sent to quarantine, or a URL is blocked, each action is listed in the Action center on the History tab.
The Reports section includes reports that show threats detected and their status. E: What can you expect from Microsoft Defender for Endpoint P1?
Microsoft Defender for Endpoint P1 is focused on prevention/EPP including:
Next-generation antimalware that is cloud-based with built-in AI that helps to stop ransomware, known and unknown malware, and other threats in their tracks.
(E) Attack surface reduction capabilities that harden the device, prevent zero days, and offer granular control over access and behaviors on the endpoint.
Device based conditional access that offers an additional layer of data protection and breach prevention and enables a Zero Trust approach.

NEW QUESTION 109
- (Topic 6)
You have a Microsoft 365 subscription.
You configure a data loss prevention (DLP) policy.
You discover that users are incorrectly marking content as false positive and bypassing the DLP policy.
You need to prevent the users from bypassing the DLP policy. What should you configure?

A. actions
B. incident reports
C. exceptions
D. user overrides

Answer: D

Explanation:
A DLP policy can be configured to allow users to override a policy tip and report a false positive.
You can educate your users about DLP policies and help them remain compliant without blocking their work. For example, if a user tries to share a document containing sensitive information, a DLP policy can both send them an email notification and show them a policy tip in the context of the document library that allows them to override the policy if they have a business justification. The same policy tips also appear in Outlook on the web, Outlook, Excel, PowerPoint, and Word.
If you find that users are incorrectly marking content as false positive and bypassing the DLP policy, you can configure the policy to not allow user overrides.

You have a Microsoft 365 subscription.
You plan to implement Microsoft Purview Privileged Access Management. Which Microsoft Office 365 workloads support privileged access?
A. Microsoft Exchange Online only
B. Microsoft Teams only
C. Microsoft Exchanqe Online and SharePoint Online only
D. Microsoft Teams and SharePoint Online only
E. Microsoft Teams, Exchanqe Online, and SharePoint Online

Answer: A

Explanation:
Privileged access management
Having standing access by some users to sensitive information or critical network configuration settings in Microsoft Exchange Online is a potential pathway for compromised accounts or internal threat activities. Microsoft Purview Privileged Access Management helps protect your organization from breaches and helps to meet compliance best practices by limiting standing access to sensitive data or access to critical configuration settings. Instead of administrators having constant access, just-in-time access rules are implemented for tasks that need elevated permissions. Enabling privileged access management for Exchange Online in Microsoft 365 allows your organization to operate with zero standing privileges and provide a layer of defense against standing administrative access vulnerabilities.
Note: When will privileged access support Office 365 workloads beyond Exchange? Privileged access management will be available in other Office 365 workloads soon.

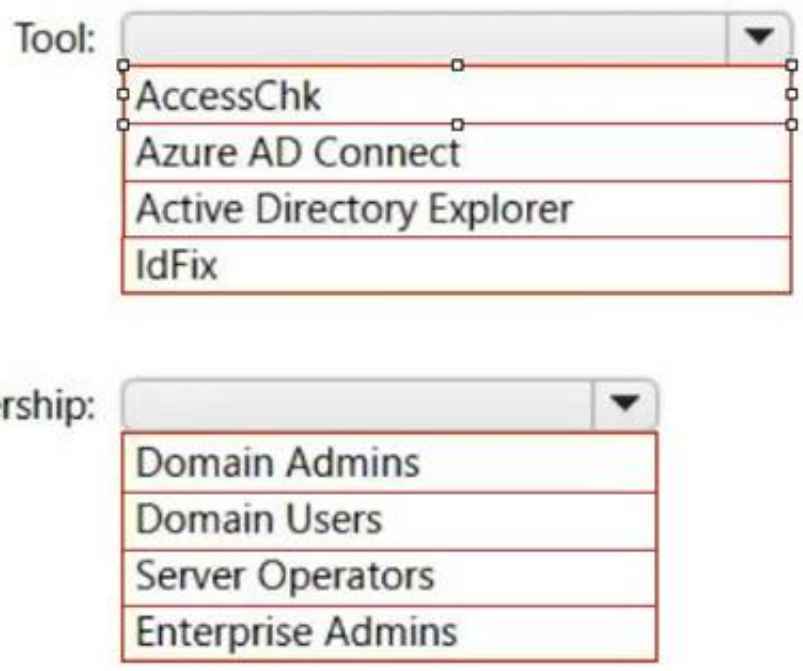
HOTSPOT
Your network contains an on-premises Active Directory domain. You have a Microsoft 365 E5 subscription.
You plan to implement directory synchronization.
You need to identify potential synchronization issues for the domain. The solution must use the principle of least privilege.
What should you use? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area



A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: IdFix
Query and fix invalid object attributes with the IdFix tool
Microsoft is working to reduce the time required to remediate identity issues when onboarding to Microsoft 365. A portion of this effort is intended to address the time involved in remediating the Windows Server Active Directory (Windows Server AD) errors reported by the directory synchronization tools such as Azure AD Connect and Azure AD Connect cloud sync. The focus of IdFix is to enable you to accomplish this task in a simple, expedient fashion.
The IdFix tool provides you the ability to query, identify, and remediate the majority of object synchronization errors in your Window's Server AD forests in

preparation for deployment to Microsoft 365. The utility does not fix all errors, but it does find and fix the majority. This remediation will then allow you to successfully synchronize users, contacts, and groups from on-premises Active Directory into Microsoft 365. Note: IdFix might identify errors beyond those that emerge during synchronization. The most common example is compliance with rfc 2822 for smtp addresses. Although invalid attribute values can be synchronized to the cloud, the product group recommends that these errors be corrected.
Incorrect:
* AccessChk
Box 2: Enterprise Admins
IdFix permissions requirements
The user account that you use to run IdFix must have read and write access to the AD DS domain.
If you aren't sure if your user account meets these requirements, and you're not sure how to check, you can still download and run IdFix. If your user account doesn't have the right permissions, IdFix will simply display an error when you try to run it.
* Enterprise Admins
The Enterprise Admins group exists only in the root domain of an Active Directory forest of domains. The group is a Universal group if the domain is in native mode. The group is a Global group if the domain is in mixed mode. Members of this group are authorized to make forest-wide changes in Active Directory, like adding child domains.
Incorrect:
* Domain Admins
Members of the Domain Admins security group are authorized to administer the domain. By default, the Domain Admins group is a member of the Administrators group on all computers that have joined a domain, including the domain controllers. The Domain Admins group is the default owner of any object that's created in Active Directory for the domain by any member of the group. If members of the group create other objects, such as files, the default owner is the Administrators group.
* Server Operator
Server Operators can log on to a server interactively; create and delete network shares; start and stop services; back up and restore files; format the hard disk of the computer; and shut down the computer. Any service that accesses the system has the Service identity.
* Domain Users - too few permissions
The Domain Users group includes all user accounts in a domain. When you create a user account in a domain, it's automatically added to this group.

You have a Microsoft 365 E5 subscription that contains a Microsoft SharePoint Online site named Site1 and the users shown in the following table.

Name	Member of	Device
User1	Group1	Device1
User2	Group1	Device2, Device3

The devices are configured as shown in the following table.

Name	Platform	Azure AD join type
Device1	Windows 11	None
Device2	Windows 10	Joined
Device3	Android	Registered

You have a Conditional Access policy named CAPolicy1 that has the following settings: 1.Assignments
? Users or workload identities: Group1
? Cloud apps or actions: Office 365 SharePoint Online
? Conditions
- Filter for devices: Exclude filtered devices from the policy
- Rule syntax: device.displayName -startsWith "Device" 2.Access controls
? Grant
- Grant: Block access
? Session: 0 controls selected 3.Enable policy: On
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User1 can access Site1 from Device1.	○	○
User2 can access Site1 from Device2.	○	○
User2 can access Site1 from Device3.	○	○

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: No
User1 is member of Group1 and has Device1.
Device1 is not Azure AD joined.
Note: Requiring a hybrid Azure AD joined device is dependent on your devices already being hybrid Azure AD joined.
Box 2: Yes
User2 is member of Group1 and has devices Device2 and Device3. Device2 is Azure AD joined.
Device2 is excluded from CAPolicy1 (which would block access to Site1). Box 3: Yes
User2 is member of Group1 and has devices Device2 and Device3.
Device3 is Android and is Azure AD registered.
Device3 is excluded from CAPolicy1 (which would block access to Site1).
Note: On Windows 7, iOS, Android, macOS, and some third-party web browsers, Azure AD identifies the device using a client certificate that is provisioned when the device is registered with Azure AD. When a user first signs in through the browser the user is prompted to select the certificate. The end user must select this certificate before they can continue to use the browser.

HOTSPOT
You have a Microsoft 365 E5 subscription that contains a Microsoft SharePoint site named Site1 and a data loss prevention (DLP) policy named DLP1. DLP1 contains the rules shown in the following table.

Name	Priority	Action
Rule1	0	Notify users by using email and policy tips. Customize the policy tip as Rule1 tip. Disable user overrides.
Rule2	1	Notify users by using email and policy tips. Customize the policy tip as Rule2 tip. Restrict access to the content. Disable user overrides.
Rule3	2	Notify users by using email and policy tips. Customize the policy tip as Rule3 tip. Restrict access to the content. Enable user overrides.
Rule4	3	Notify users by using email and policy tips. Customize the policy tip as Rule4 tip. Restrict access to the content. Disable user overrides.

Site1 contains the files shown in the following table.

Name	Matched DLP rule
File1.docx	Rule1, Rule2, Rule3
File2.docx	Rule1, Rule3, Rule4

Which policy tips are shown for each file? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

File1.docx:
- Rule1 tip only
- Rule2 tip only
- Rule3 tip only
- Rule1 tip and Rule2 tip only
- Rule1 tip, Rule2 tip, and Rule3 tip

File2.docx:
- Rule1 tip only
- Rule3 tip only
- Rule4 tip only
- Rule1 tip and Rule4 tip only
- Rule1 tip, Rule3 tip, and Rule4 tip

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Rule1 tip only
File1 matches Rule1, Rule2, and Rule3. Rule1 has the highest priority.
Note: The Priority parameter specifies a priority value for the policy that determines the order of policy processing. A lower integer value indicates a higher priority, the value 0 is the highest priority, and policies can't have the same priority value.
Box 2: Rule1 tip only
Note: User Override support
The option to override is per rule, and it overrides all of the actions in the rule (except sending a notification, which can't be overridden).
It's possible for content to match several rules in a DLP policy or several different DLP policies, but only the policy tip from the most restrictive, highest-priority rule will be shown (including policies in Test mode). For example, a policy tip from a rule that blocks access to content will be shown over a policy tip from a rule that simply sends a notification. This prevents people from seeing a cascade of policy tips.
If the policy tips in the most restrictive rule allow people to override the rule, then overriding this rule also overrides any other rules that the content matched.

Your network contains an Active Directory domain. You deploy an Azure AD tenant.
Another administrator configures the domain to synchronize to Azure AD.
You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.
You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.
You need to ensure that the 10 user accounts are synchronized to Azure AD. Solution: You run idfix.exe and export the 10 user accounts.
Does this meet the goal?

A. Yes
B. No

Answer: B

Explanation:
The question states that “all the user account synchronizations completed successfully”. If there were problems with the 10 accounts that needed fixing with idfix.exe, there would have been synchronization errors in Azure AD Connect Health.
It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule.

Demonstrate data protection
Protection of personal information in Microsoft 365 includes using data loss prevention (DLP) capabilities. With DLP policies, you can automatically protect sensitive information across Microsoft 365.
There are multiple ways you can apply the protection. Educating and raising awareness to where EU resident data is stored in your environment and how your employees are permitted to handle it represents one level of information protection using Office 365 DLP.
In this phase, you create a new DLP policy and demonstrate how it gets applied to the IBANs.docx file you stored in SharePoint Online in Phase 2 and when you attempt to send an email containing IBANs.
? From the Security & Compliance tab of your browser, click Home.
? Click Data loss prevention > Policy.
? Click + Create a policy.
? In Start with a template or create a custom policy, click Custom > Custom policy > Next.
? In Name your policy, provide the following details and then click Next: a. Name: EU Citizen PII Policy b. Description: Protect the personally identifiable information of European citizens
? Etc.

Automatically encrypt documents stored in Microsoft OneDrive and SharePoint.
Enable co-authoring for Microsoft Office documents encrypted by using a sensitivity label. Which two settings should you use in the Microsoft Purview compliance portal? To answer,
select the appropriate settings in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Information protection
Automatically encrypt documents stored in Microsoft OneDrive and SharePoint.
How to integrate Microsoft Purview Information Protection with Defender for Cloud Apps Enable Microsoft Purview Information Protection
All you have to do to integrate Microsoft Purview Information Protection with Defender for Cloud Apps is select a single checkbox. By enabling automatic scan, you enable searching for sensitivity labels from Microsoft Purview Information Protection on your Office 365 files
without the need to create a policy. After you enable it, if you have files in your cloud environment that are labeled with sensitivity labels from Microsoft Purview Information Protection, you'll see them in Defender for Cloud Apps.
To enable Defender for Cloud Apps to scan files with content inspection enabled for sensitivity labels:
In the Microsoft 365 Defender portal, select Settings. Then choose Cloud Apps. Then go to Information Protection -> Microsoft Information Protection.
Note: Encryption of data at rest
Encryption at rest includes two components: BitLocker disk-level encryption and per-file encryption of customer content.
BitLocker is deployed for OneDrive for Business and SharePoint Online across the service. Per-file encryption is also in OneDrive for Business and SharePoint Online in Microsoft 365 multi-tenant and new dedicated environments that are built on multi-tenant technology. Box 2: Settings
Enable co-authoring for Microsoft Office documents encrypted by using a sensitivity label.
* 1. Sign in to the Microsoft Purview compliance portal as a global admin for your tenant.
* 2. From the navigation pane, select Settings > Co-authoring for files with sensitivity files.
* 3. On the Co-authoring for files with sensitivity labels page, read the summary description, prerequisites, and what to expect.
* 4. Then select Turn on co-authoring for files with sensitivity labels, and Apply.
* 5. Wait 24 hours for this setting to replicate across your environment before you use this new feature for co-authoring.

HOTSPOT - (Topic 6)
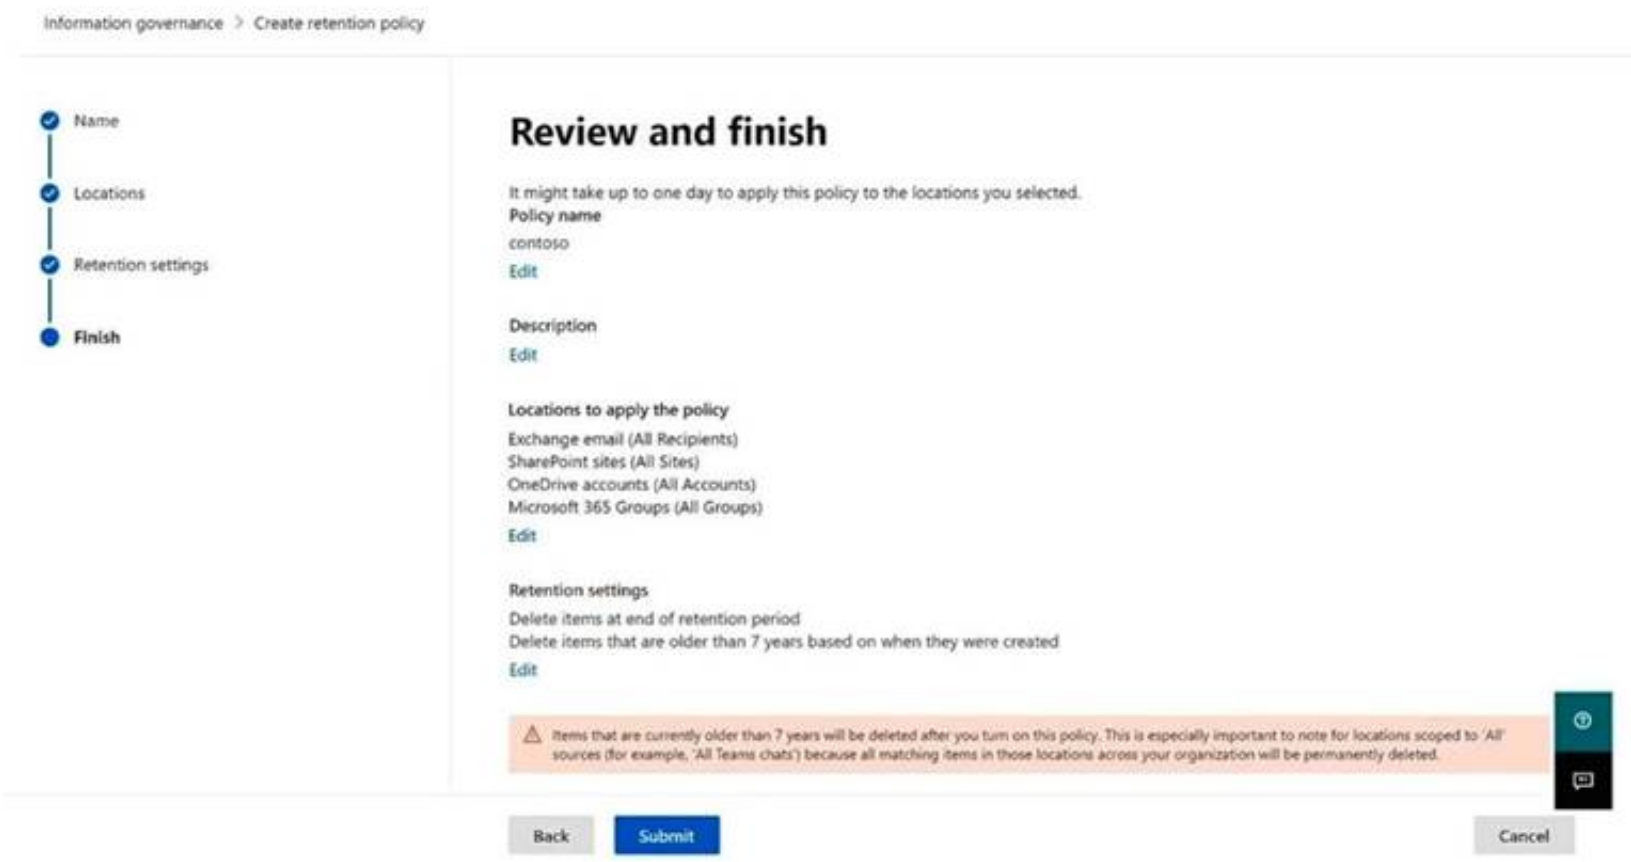
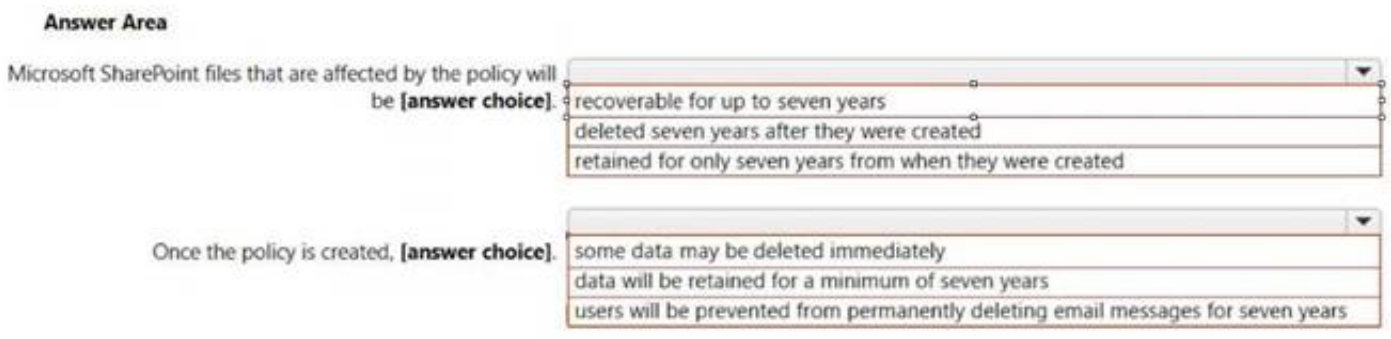
HOTSPOT
You have a Microsoft 365 tenant.
You plan to create a retention policy as shown in the following exhibit.



Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.



A. Mastered
B. Not Mastered

Answer: A

Explanation:
Box 1: Deleted seven years after they were created. From the exhibit:
The retention policy applies to SharePoint sites.
Delete items that are older than 7 years based on when they were created.
Box 2: data will retained for a minimum of seven years
The longest retention period wins. If content is subject to multiple retention settings that retain content for different periods of time, the content will be retained until the end of the longest retention period for the item.
Note: Use a retention policy to assign the same retention settings for content at a site or mailbox level, and use a retention label to assign retention settings at an item level (folder, document, email).
For example, if all documents in a SharePoint site should be retained for 5 years, it's more efficient to do this with a retention policy than apply the same retention label to all documents in that site. However, if some documents in that site should be retained for 5
years and others retained for 10 years, a retention policy wouldn't be able to do this. When you need to specify retention settings at the item level, use retention labels.

B. January 1,2024
C. January 31, 2023
D. January 31, 2024
E. never

Answer: D

Explanation:
Retention wins over deletion. Note:
Explanation for the four different principles:
* 1. Retention wins over deletion. Content won't be permanently deleted when it also has retention settings to retain it. While this principle ensures that content is preserved for compliance reasons, the delete process can still be initiated (user-initiated or system- initiated) and consequently, might remove the content from users' main view. However, permanent deletion is suspended.
