NEW QUESTION 3

Your company plans to use Microsoft 365 Copilot.

You need to provide a user with the ability to use Microsoft 365 Copilot, including the Researcher and Analyst agent. What should you use?

- A. the Microsoft Entra admin center
- B. the Microsoft Purview portal
- C. the Microsoft Defender portal
- D. the Microsoft 365 admin center

Answer: D

NEW QUESTION 4

You need to create a Microsoft 365 Copilot agent that can create charts and visualizations based on a Microsoft Excel workbook. What should you configure for the agent?

- A. the Scrum Assistant template
- B. the Customer Insights Assistant template
- C. the code interpreter capability
- D. the image generator capability

Answer: C

Explanation:

The correct answer is C. the code interpreter capability. Microsoft Learn states that the code interpreter capability for Microsoft 365 Copilot declarative agents allows the agent to generate and execute Python code to analyze data and generate visualizations. Microsoft's agent schema documentation explicitly describes Code Interpreter as a capability used to solve complex math problems, analyze data, and generate visualizations. That directly matches the requirement to create charts and visualizations from a Microsoft Excel workbook.

Microsoft documentation also explains that code interpreter supports working with Excel files and is used for scenarios such as data analysis, statistical computations, and generating charts. This makes it the correct configuration for an agent that must reason over workbook data and produce chart-based outputs. By contrast, the image generator capability is for creating images, not for analyzing workbook data. The Scrum Assistant and Customer Insights Assistant options are templates, not the specific technical capability required to read data and build charts from an Excel workbook.

NEW QUESTION 8

Your organization has a Microsoft 365 subscription. All users are assigned a Microsoft 365 Copilot license. You need to prevent the users from generating images by using Copilot. What should you use?

- A. the Microsoft Defender portal
- B. the Microsoft Purview portal
- C. the Microsoft 365 admin center
- D. the Microsoft Entra admin center

Answer: C

Explanation:

The correct answer is C. the Microsoft 365 admin center. Microsoft Learn documents a specific Copilot image generation setting in the Microsoft 365 admin center under Copilot > Settings > Copilot actions > Copilot image generation. Microsoft states that when this scenario is allowed, users can ask Copilot to create, design, and edit images. When it is not allowed, Copilot does not generate images and instead responds with stock or brand images. This directly matches the requirement to prevent users from generating images by using Copilot.

The other options are incorrect because Microsoft does not document this control as being managed from Defender, Purview, or Entra for this scenario. Microsoft also separately notes that organizations can control access to Designer image generation through policy, but the admin experience for managing the Microsoft 365 Copilot scenario itself is explicitly surfaced in the Microsoft 365 admin center. Therefore, for an exam question focused on where an admin should go to disable image generation in Copilot, the best and documented answer is the Microsoft 365 admin center.

NEW QUESTION 39

HOTSPOT

You need to ensure that users can use an external system as a knowledge source for custom Microsoft 365 Copilot agents. What should you configure in the Microsoft 365 admin center? To answer, select the appropriate settings in the answer area.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

The correct answer is Connectors. Microsoft documents that Microsoft 365 Copilot connectors are used to bring external, line-of-business data into Microsoft 365 Copilot so users can search, reason over, and act on content from non-Microsoft systems. Microsoft also states that admins must enable and configure Copilot connectors in the Microsoft 365 admin center, and once configured, those connectors can be selected as knowledge sources for custom agents. This directly matches the requirement to let users use an external system as a knowledge source for custom Microsoft 365 Copilot agents. This is why the hotspot in the Copilot area should be set to Connectors, not Overview, Agents, Search, Billing & usage, or Settings. Overview provides status information, Agents is for agent management, Search is for Microsoft Search experiences, and Billing & usage is for metering and consumption tracking. The specific admin feature that enables external enterprise data sources for agent grounding is Connectors. Microsoft further explains that configured connectors can expose external knowledge securely and respect source-level permissions when used in agent scenarios.
